All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock· Index, Route 5, Texarkana; Lutherville, Route 1. ARKANSAS SECTION

WALTER C. HICKMON

VOL. LI LITTLE ROCK, ARK., NOVEMBER, 1946 No. 11

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

During the first ten days of the month, about 90 per cent of the month's precipitation fell; and the highest temperatures over practically the entire State occurred during the first two days.

November's weather was not too favorable to crops about ready to harvest; late cotton was slow in opening; rice harvest delayed; sweet and irish potato harvest slowed; corn harvested high in moisture content. Fall sown grains, winter legumes, and pastures showed excellent growth. Floods hampered harvests in some areas (see Floods).

TEMPERATURE

The November mean of 53.6° was 2.2° above the 56 year average. The temperatures ranged from about 4.5° above normal in the alluvial sections to 0.5° below normal in the Ozark highlands. The highest temperature of 85° was reported by three stations on the 1st: Newport, Searcy and Warren. Gilbert reported the lowest with 17° on the 18th. By the end of the month, freezing temperatures, or killing frosts had been reported over practically the entire State; the only exceptions being a few stations along the lower Arkansas River.

PRECIPITATION

The average rainfall set a record for November, exceeding by almost 50% the previous high. The average for the State was 9.03 inches, while the previous November high was 6.89 inches in 1934. Most of the stations in the west-central and northwest portions set individual records for the greatest November rainfall, and several stations set records for the greatest fall for any one month. The precipitation was near normal along the Mississippi River and increased rapidly toward the west.

White Rock, in Franklin County, reported the greatest total with 17.14 inches. Blytheville was outstanding in the fact that they reported 3.35 inches, or a deficiency of 0.01 inch; and was the only station reporting below normal fall for November.

Sleet was reported by one station: Fayetteville on the 25th.

TORNADO

The following description was furnished by Mr. Thurston A. Hulsey, Washington High School, Washington, Arkansas(northwest of Hope). The tornado occurred about 2:30 p m. of November 2d. There was a large, very dark cloud overhead with corkscrewing smaller clouds dipping to the ground and then rising. The cloud came from the southwest and went toward the northeast. The width of destruction was between 150 and 200 yards, and about 4 miles long. The tornado lasted about 2 minutes and was gone. It came to this vicinity from Crossroads. It rose again at the city limits and played out. It completely demolished a church, and damaged several dwellings and business houses. Most of the farmers had finished harvesting their crops, so slight damage was done in this manner. Two people were injured during the storm; a Mrs. Mattie Aylett was injured so severely that she died two weeks later. The damage caused by this storm will total about $40,000.00

FLOODS

The rainfall of the first ten days of the month sent most of the streams into flood. The fact that the previous few months had been relatively dry, prevented serious conditions.

Arkansas River: No flood stages were reached on the Arkansas River, but some of the smaller streams overflowed their banks and caused slight damage. Two hundred acres was reported innundated with a loss of unharvested corn, cotton, and alfalfa.

Ouachita River: The Ouachita was above flood stage from the 10th through the 17th. The stages were not serious and only one to four feet above flood. 3500 acres were innundated, most of which were in Hot Springs County.

White River: The White River went above flood stage at Cotter on the 10th, and some part of the White was above flood until the 28th. The flood stages were exceeded by only a couple of feet and the damage was small as compared with earlier floods. 25,000 acres were inundated, with damage to crops still in the fields, mostly corn.

ERRATA

Morrilton: The river stages as printed in the August 1946 Climatological Data were incorrect. All readings during the month were below zero, and in order to correct the readings given in the August issue subtract 10.0 from the figures given. For example, 7.5 feet is shown as the stage on the 1st, subtracting 10.0 from this figure gives -2.5, the correct stage.

MISCELLANEOUS PHENOMENA
Dates of

Thunderstorms: 1, 2, 3, 4, 5, 6, 8, 9, 10, 15, 16, 25, 26.
High Winds: 1, 2, 3, 4, 5, 7, 9, 10, 14, 15, 16, 17, 20, 21, 22, 23, 24, 25, 28, 29.
Heavy Fog: 2, 3, 4, 5, 7, 13, 16, 19, 20, 21, 26, 27, 29, 30.
Sleet: 25.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. ^{1} Midnight to midnight. ^{2}Measured in the morning for the preceding 24 hours. ^{3}Data for 24 hours ending at 12:30 a..m. of the following day. ^{4}Best available used for stations not equipped with recorders. ^{5}Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott· Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry: Odell, Route 1, Canehill: Rosebud, Route 2, Mt. Vernon: Sheridan, Hensley: Stamps, Buckner: Sugar Loaf Mountain, Heber Springs; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

3 ARKANSAS SECTION

WALTER C. HICKMON

VOL. LI LITTLE ROCK, ARK., DECEMBER, 1946 No.12

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Arkansas was under the influence of high pressure most of the month. These highs were mostly centered over the eastern half of the United States; this resulted in a flow of air from the south, giving the State the fourth warmest December in 56 years.

A series of storms (LOWS), which moved eastward along the northern border of the United States, sent cold air down over Arkansas beginning the 9th, giving about three days of moderate to heavy rains and showers over the entire State.

On the 28th, a deep low centered over the lake region caused a new mass of cold air to move in over the State. This new cold air coupled with the unseasonably warm air, already over the State, created a tornado which followed along a cold front from the southwest to the northeast (see Tornado)

TEMPERATURE

December 1946 was the fourth warmest December in 56 years, with its average temperature of 48.3°; 5.5° above the average. Highest temperature reported during the month was 81° at Gilbert on the 6th. Practically all the stations in the State reported their highest temperatures on the 28th; just before the tornado moved across the State. White Rock reported the lowest with 4° on the 30th. The growing season in the State was finally ended with the advent of either freezing temperatures or killing frost, along the lower Arkansas on the 2d.

PRECIPITATION

Precipitation was only 0.05 inch below the average for the State as a whole, with 4.18 inches. This does not give a clear picture, however, as some stations in the alluvial section reported deficiencies of as much as 3.00 inches; while stations it the Ozark region reported excesses up to 5.00 inches. These heavy rains in the Ozarks caused minor floods in the Ouachita, White, and Arkansas Rivers. Hail was reported at several stations on the 28th. The northern two-thirds of the State ended the year uner a snow blanket of 1.0 to 3.5 inches of snow.

TORNADO

A small tornado swept across the State during the evening of the 28th. The tornado first made its appearance about six miles west of Newhope, at approximately 5:00 p.m.; last appearance was about two miles north of Bradford, at approximately 10:30 p.m. The tornado travelled 155 miles 5.5 hours; about 28.5 miles per hour. The major portion of the damage was reported in the first fifty miles of travel. Points of contact reported: About 6 miles west of Newhope; Langley; Hopper; Jessieville; several points in the Ouachita National Forest; Providence; and Possum Grape (2 miles north of Bradford). High winds were reported generally over the State at the time of the tornado, but Wynne was the only place to report any serious damage. The damage at Wynne totaled $16,078.00 to a warehouse and merchandise. The damage in the tornado strip totaled $95,915.00 to personal property; $200,000.00 to standing timber (7,000,000 to 8,000,000 feet); and 23 people injured.

MISCELLANEOUS PHENOMENA

Dates of

Thunderstorms: 2, 9, 10, 11, 12, 28, 29.

High Winds: 1, 7, 8, 9, 11, 12, 13, 16, 17, 18, 20, 21, 26, 27, 28, 29, 30, 31.

Heavy Fog: 6, 7, 8, 9, 10, 11, 12, 13, 15, 16, 23, 24, 25, 26, 27, 28.

Hail: 28.

Killing Frost (Freezing Temp.): 1, 2.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2] Measured in the morning for the preceding 24 hours. [3] Data for 24 hours ending at 12:30 a. m. of the following day. [4] Best available used for stations not equipped with recorders. [5] Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilia: Boughton, Route 4, Prescott: Cold Springs, Olio: Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg: Green Mountain, Calico Rock: Index, Route 5, Texarkana: Lutherville, Route 1, Lamar: Moro Bay Route 3, El Dorado: Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry: Odell, Route 1, Canehill; Rosebud, Route 2, Mt. CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LI LITTLE ROCK, ARK., YEAR, 1946 No. 13

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D.C

GENERAL SUMMARY

The year 1946 was reaching for new records in weather. Several individual stations made records for greatest amounts of precipitation ever recorded in May, and again in November. A new November record for the entire State was also set. New individual station records for temperature were set; this was particularly true on December 28.

The 1946 average precipitation of 58.42 inches was the fifth highest in 56 years record, but still small compared with the 1945 record of 65.56 inches. January, May, and November contributed almost half of the 1946 fall.

There were nine stations in the State reporting more than 70.00 inches of precipitation for the year. This figure is more than 20.00 inches above the State's 56 year average. Mount Ida reported the greatest with 83.28 inches, an excess of 32.10 inches. This is not the record for Mount Ida, however, as their 1945 total and record high was 83.73 inches.

The year as a whole, as far as temperatures were concerned, was comparatively mild. No record extremes were recorded. The lowest temperature reported was 4° at Turnpike and White Rock on December 30; the highest was 109° at Booneville on August 17. Compare this with the record extremes of 29° below zero and 120°.

The year 1946 was a good agricultural year in spite of the occasional weather handicaps. Yields of all crops were good to excellent, and winter grains and pastures were in good condition at the close of the year.

RIVERS IN 1946

Floods on the major streams of the State were in progress during all months of the year, except July through October, inclusive. The floods on the Arkansas, Ouachita, and White Rivers in January, and November-December were the most destructive and accounted for most of the three-quarters of a million loss during the year. The floods during the other months of the year were more of the nuisance type, causing delayed planting, or replanting of flooded areas. No record high stages occurred during the year; a record low stage on the Arkansas was 4.6 feet below zero at Morrilton on October 13.

TORNADOS IN 1946

Three tornados occurred during the year, killing four people and injuring seventy-four. Total damages amount to $401,993.00. More than $300,000.00 of this occurred when a tornado struck the western part of Pike County, then followed a path northeastward for 155 miles, through the Ouachita National Forest to Jackson County.

WEATHER BY MONTHS

January was the seventh wettest January since 1891 with 7.50 inches precipitation average for the State. There was very little farming activity during the month due to wet soil. The temperature was practically normal, with 41.0°, only 0.1° below the 56 year average.

February was above the State average in both temperature and precipitation; but no records were set. The temperatures were unusually mild, with 11° being the lowest reached in the State. Farm operations were still retarded by wet soil.

March, like February, continued above normal in both temperature and precipitation, and all vegetation took on rapid growth. Farm operations picked up despite wet soil in the lowlands.

April's precipitation and temperature continued above normal, and agriculture began to show the results of favorable moisture conditions. Some replanting was necessary in many sections due to heavy rains.

May was unfavorable to crop growth with temperatures below normal and rain about twice the 56 year average. Farm work was also slowed by floods at a critical time of the season.

June was deficient in both temperature and precipitation, but it came at a time when it gave farmers a chance to accelerate all farm activities. Streams also had a chance to return to normal flow during the month.

July was practically a normal month, with both the precipitation and temperature slightly above normal. Precipitation was below normal in the northwest section and along the western border; dry weather in these sections curtailed crop yields somewhat.

August was deficient in both temperature and rainfall. The highest 1946 temperature was reported at Booneville, with 109° on the 17th. All crops suffered from lack of rain during the latter part of the month.

September continued with drier and cooler weather than normal. Cotton was retarded by lack of sunshine, and most other crops by lack of rain; even the leaves turned to fall-colors prematurely.

October was about a normal month, with no extremes in either temperature or rainfall. The weather was most favorable to the harvest of crops. Rains, the latter part of the month, delayed fall seeding, but were of great benefit to areas already planted.

November was a month of action: the precipitation set a new November high for the 56 years of record, with 9.09 inches, almost 50% above the previous record in 1934. A small tornado struck in Hempstead County (see storms). Floods occurred in the Ouachita and White River Basins.

December continued November's plan of action: heavy rains over the mountainous sections again sent the Ouachita and White, plus the Arkansas into flood; a tornado travelled 155 miles across the State; fourth warmest December in 56 years, with many high records being set on December 28, just prior to the tornado; lowest 1946 temperature reported as 4° at Turnpike and White Rock.

The departures from normal temperature and precipitation are computed from
averages of the entire period for stations having 10 or more years of record.
T., less than 0.01 inch rain or melted snow. Reference letters ^{a}, ^{b}, ^{c}, appear-
ing in the table indicate number of days missing. § Also on later dates.
†Post-office addresses of these stations as follows: Alum Fork Reservoir, Paron;
Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Bough-
ton, Route 4, Prescott; Cold Springs, Olio; Devils Knob, Salus; Eagle Gap, Eagleton;
Eleven Point, Rt. 1, Ravendon Springs; Fordyce, Rt. 1, Fordyce; Fort Smith Water Plt.,
Mountainburg; Green Mountain, Calico Rock; Huttig, Felsenthal; Index, Route 5,
Texarkana; Lutherville Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Rt.
3, Morrilton; Mulberry, Rt 1, Mulberry; Nimrod, Ola; Odell, Route 1, Canehill; Rosebud
Route 1, Mount Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Spring-
bank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White
Rock, Cass.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LII LITTLE ROCK, ARK., JANUARY, 1947 NO. 1

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Two small storms (LOWS) passed over the State; one during the period, 1st through 3d, and the other on the 15th. The weather from these two storms was relatively unimportant, except for general precipitation.

A HIGH was centered southeast of Arkansas during most of the period from 15th to 29th. The circulation on the backside of this HIGH, and from several LOWS over the Southwest resulted in southerly winds giving unseasonably high temperatures over most of the State; with new record highs being recorded on the 29th. At this time, the weather just north of Arkansas was cold and near the seasonal average, and moving southward. Late the afternoon of the 29th, the cold air began to move across the State. This mixing with the unusually warm air over the State created a tornado in north-central Arkansas, which ran on a southwest to northeast path into Missouri (see Tornado.)

Winter grains and soil conditions were good to excellent, although the precipitation was about half of normal. This was due to both sub-soil moisture remaining from the heavy rains of November and December, and well distributed precipitation during the month.

TEMPERATURE

The average temperature over the State was slightly above normal for January with a mean of 42.5°. This mean is 1.5° above the 57 year average. By comparison, January 1947 was a moderate month with very few rapid changes in temperature. The extreme high in the State was 81° at Crossett on the 15th; the lowest was −4° at Gravette on the 4th. All stations in Benton County, and Fayetteville Experiment Station in Washington County reported below zero temperatures on the 4th. No other sub-zero temperatures were reported in the State during the month. Practically all the stations in the State reported their highest temperatures for January on the 29th, just before the tornado in north-central Arkansas.

PRECIPITATION

The January State average of 2.33 inches was only 55% of the 57 year average. A few stations in the southeast corner of Arkansas reported above-normal falls. Portland reported the highest total with 8.58 inches, 3.83 inches above their average. Stations in Central Arkansas reported the greatest deficiencies, with up to more than 3.00 inches below the average. The small amount of precipitation that did fall was well distributed. Hail occurred over north-central Arkansas during the tornado of the 29th.

TORNADO

The combination of the unseasonably warm weather and the incoming cold mass of air on the 29th created a tornado in the vicinity of Calico Rock at about 5:20 p.m. This tornado made its first contact just south of Salem, where it dug a furrow more than a foot deep and several hundred feet long before entering Salem at 5:55 p.m. The tornado destroyed more than half the residential section of Salem, but the people there, being tornado-conscious, were already in their storm cellars. As a result, not one person was killed in Salem, although the homes destroyed totaled 32 and 44 damaged. The total damage in Salem and vicinity was $168,480.00 and 12 people injured. JCH

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Index, Route 5, Texarkana; Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry: Odell, Route 1, Canehill; Rosebud, Route 1, Mt. CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. LII Little Rock, Ark., February, 1947 No. 2

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

February for Arkansas was outstanding in the fact that no storms (LOWS) passed over the State during the month. The nearest LOW centers passed several hundred miles to the north and south. The few rains that did occur during the month were as a result of cold fronts moving in from the north.

A review of the weather maps of February shows a tongue of cold air, extending from Canada, laying over Arkansas practically the entire month. This caused the sixth coldest February in 57 years record, and also the second driest.

February 1947 set a record for the greatest number of clear days with an average of 17. The previous high average was 15, and had occurred in five different instances. This clear weather was directly associated with the dry cold air that overran the State.

February was not too favorable to agriculture; winter grains suffered most from the continued dry and cold. Strawberries were also damaged by the dry weather. Considerable early plowing was accomplished.

TEMPERATURE

The mean temperature for the month was 37.2°; 6.4° below the 57 year mean. This mean also ranks as the sixth coldest in 57 years. Although this was one of the coldest Februarys of record, there were no radical extremes in temperature.

The lowest temperature recorded in the State was 1° above zero at Devil's Knob on the 4th. The usual condition for a low average for the State is to have numerous readings below zero. The highest temperature reported was 80°, and occurred at three stations: Crossett, Fordyce, and Okay on the 16th.

Every station in the State reported means below normal. The departures ranged from 3.1° to 9.0°. Marked Tree reported the greatest deficiency with 9.0° below normal, and a mean of 33.6°. Bentonville reported the lowest mean with 31.0°.

PRECIPITATION

February's precipitation, like its temperatures, was below normal at all stations. Some stations in the southeast reported falls of 2.00 to almost 4.00 inches. Monticello reported the heaviest for the month with 3.85 inches.

Toward the northwest corner of the State, the deficiencies became greater. Crawford County was the driest county; the Fort Smith Water Plant in that county reported only a trace for the full month. Several other stations in that section reported total falls of less than 0.15 inch.

The average for the month was 0.78 inch, or 2.71 inches below the 57 year average; this is the second smallest in the same period. The record was 0.71 inch in 1895. J.C.H.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg: Green Mountain, Calico Rock; Index, Route 5, Texarkana: Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry: Odell, Route 1, Canehill; Rosebud, Route 1, Mt. ARKANSAS SECTION

WALTER C. HICKMON

Vol. LII Little Rock, Ark., March, 1947 No. 3

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

March was the third successive month with very little weather activity from the passage of LOWS over the State. Weak LOWS did move over the State on the 1, 5, 12-13, 16-17, and 27th. Another LOW moved eastward over Missouri on the 23-24th, dropping a cold front down over Arkansas. The passage of these LOWS accounted for practically all of the rain during the month; and since they were weak, the rains were light to moderate and well distributed over the month.

March was very similar to February in the fact that a tongue of cold air, extending down from Canada, covered the State most of the month. This resulted in the second coldest March in 57 years record.

The combination of the well distributed rains and moderate continuous cold was mostly favorable to agriculture. Considerable plowing was completed; fruits and berries were retarded, but permitting them to escape damaging frosts. The last general killing frost occurred over the State on the 28th.

TEMPERATURE

The March mean temperature was 45.0°, 7.5° below the 57 year average; and the second coldest March in the same period. The coldest March mean was 42.5° in 1915. All stations in the State reported deficiencies, and Benton led with a mean of 42.4°, 10.2° below the normal.

Monticello and Arkadelphia reported the highest temperatures of the month with 79°. All stations, except six, reported temperatures in the upper seventies during the latter part of the month. The lowest temperature was 5° above zero, and occurred at Devil's Knob on the 2d.

PRECIPITATION

The March total of 2.69 inches was only 57% of the 57 year average. It was not an unusually dry month though, as smaller amounts were recorded eleven times in the same period.

What precipitation did fall was well distributed over the month, but poorly distributed over the State. The average fall over the north-central counties was less than an inch, while some southern counties reported more than 6.00 inches. The following counties reported an excess of 0.10 to 2.20 inches of precipitation for March: Ouachita, Calhoun, Union, and Ashley. All other counties reported deficiencies ranging up to 4.00 inches.

The average snowfall for the month was about twice the normal fall. Many stations in the mountainous sections reported the heaviest March snows since 1942.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LII LITTLE ROCK, ARK., APRIL, 1947 NO. 4

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

April 1947 was just about an average April as compared with the 57 years of record. The temperature was 0.3° above the average and precipitation was 0.71 inch above. The rain was well distributed over the month permitting a fair amount of farm work.

Several LOWS passed over, or near, the State during the month; most of these were weak. The strongest of these LOWS developed over Texas on the 7th, and moved slowly NNE across Oklahoma. The fronts associated with this LOW caused about half of the April rainfall, which fell during the period 7th through 11th.

A cold front, part of a LOW centered over Iowa, moved into the State late the 29th, and this coupled with the warm moist air over that section created a tornado in Benton County. (See reports under Storms.)

The month, as a whole, was very favorable to agriculture. Some damage to cotton and corn occurred from the heavy rains of the 7th to 11th, which required replanting. A light to moderate frost occurred over the State on the 17th, but very little damage was reported.

Some flooding in the rivers of Arkansas occurred about the middle of the month, and again toward the end. Damage was minor, as very little planting had been completed outside the levees. Greatest loss was reported in the Clarksville area, where $1,500.00 worth of spinach was reported destroyed.

TEMPERATURE

The April mean was 61.9°, 0.3° above the 57-year average. April's extremes were comparatively mild with a low of 26° at Lead Hill on the 17th, and high of 89° at Hot Springs on the 6th. The coldest morning for the State occurred on the 17th, with practically all stations reporting their lowest April temperatures, and they ranged from 26° to 38° over the entire State.

PRECIPITATION

The April average of 5.74 inches was 0.71 inch above the 57-year average, but was by far the wettest month in 1947. The greatest fall at any one station was 9.03 inches at El Dorado; they also reported the greatest 24-hour fall, with 3.66 inches on the 7th-8th. The least monthly total was 2.87 inches at Harrison.

STORMS

Several widely scattered hail storms were reported during the month, but damage was slight, except in the one that occurred south of Little Rock on the 9th. Hailstones were described as "large as hen eggs", and remained on the ground until late in the afternoon. Roofs of four homes were destroyed, and many others were damaged. Early garden crops were completely destroyed; even then damage was small as few were in.

A severe thunderstorm struck the Greater Little Rock Area late April 19th. Strong gusty winds from the storm resulted in

(Continued from Front Page)

considerable damage to real and personal property. Damage to real property is estimated at $60,000.00. Damage to personal property was approximately $40,000.00; the major portion of this damage was to privately owned planes staked out on Adams Field. The thunderstorm, or thunderstorms, continued its eastward movement across the State and additional damage amounting to about $50,000.00 was reported. The following places reported damage: Sylamore, Searcy, Augusta, Lewisville, and Beebe. Several people were injured slightly, and the monetary damage was $150,000.00.

A tornado occurred in Benton County, beginning about 8:00 pm of April 29th. The path of the tornado was about 1000 feet in width, and 20 miles in length, and extended from about two miles west of Avoca, to a mile north of Eureka Springs. The monetary loss from this tornado was approximately $200,000.00. Nine people were killed, and more than 50 injured.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Index, Route 5, Texarkana: Lutherville, Route 1. ARKANSAS SECTION

WALTER C. HICKMON

Vol. LII Little Rock, Ark., May, 1947 No. 5

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Three LOWS moved across the State during the month; on the 20th, 24th, and 28th. These LOWS, although relatively weak, accounted for about one-third of the month's precipitation; most of the remaining precipitation was caused by the passage of Cold Fronts across the State, that were associated with LOWS moving eastward over the Canadian Border States.

A Cold Front, associated with a LOW centered over Wisconsin, moved across the State on the first. A line of thunderstorms preceded the passage of this front, and were severe in the northeast portion of the State (See report of storm below).

Some farming orerations were delayed by wet fields during the latter half of the month. The rains were not unusually heavy, but were spaced so as to keep the fields wet.

No floods occurred on any of the major streams during the month. The Lower White River, Clarendon and below, was at flood stage the beginning of the month, due to a rise in April.

TEMPERATURE

The average temperature for the State was 67.4°, 1.6° below the 57 year average. The highest for the month was 95°, reparted by Nimrod Dam and Perryville on the 4th. Practically all stations in the State reported temperatures in the lower nineties on this same date. The lowest temperature reported for the month was 36° at Mammoth Springs and Harrison on the 9th and 29th, respectively.

PRECIPITATION

The average precipitation for the State was 5.50 inches, 0.52 inch above the 57 year average. DeQueen reported the greatest monthly total with 9.47 inches; 4.18 inches above their normal. 6.43 inches of this amount fell in 24 hours on the 12th-13th. Several other stations reported more than 8.50 inches for the month. Less than a quarter of the rainfall stations in the State reported a deficiency; Warren was the driest of these with only 2.20 inches for the month.

STORMS

A severe thunderstorm struck the northeast portion of the State early the morning of May 1. This storm was associated with a squall line, the forerunner of a Cold Front, then moving SE across the State. This squall line produced thunderstorms over practically the entire State, but they did not reach their full fury until they reached the northeast portion.

Summary Continued on Page 28

(Continued from Front Page)

The storm first hit at Cash, Craighead County, at 4:00 a.m., then moving SE, it cut a path about 50 miles wide across Greene, Craighead, Poinsett, and Mississippi Counties. The last report of the storm was from Wilson, Luxora, and Blytheville (all in Mississippi County) at 5:00 a. m. The storm had earlier been reported as a tornado, but final reports did not confirm this.

Damage was scattered over the four counties and not confined to any one area, and consisted of mostly homes, stores, churches, and schools destroyed. The total property damage for the four counties totals $200,000.00; one person was killed at Caraway, and thirty-five were injured in the four counties. Considerable damage was also reported in the southeastern tip of Missouri.

Earl Petty, of Benton, was killed when struck by lightning at a sawmill 12 miles west of Benton, during the afternoon of May 9.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LII   LITTLE ROCK, ARK., JUNE, 1947   No. 6

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

June weather over Arkansas was dominated by High Pressure Areas that were centered over the eastern sections of the United States. No LOWS passed directly over the State, and those that influenced June's weather developed on the eastern slopes of the Central Rockies, and moved either northeast or east.

The first severe weather of the month was due to the movement of a squall-line and Cold Front across the State on the first. The Cold Front was associated with a LOW centered over Kansas. An upper Cold Front, in advance of the surface Cold Front, created a tornado just south of Pine Bluff on the afternoon of the first (see Storms).

The warmest period of the month was from the 5th through the 12th, during which time Arkansas was on the backside of a HIGH centered over the southeastern part of the United States. The HIGH was drawing tropical warmed air over the State giving temperatures in the nineties over most of the State. The average temperature during this period was about 5° above the average.

An unusually cool period of weather prevailed from the 13th through the 17th, and was due to the movement of several Cold Fronts across the State. These fronts were associated with LOWS that had developed in the Rockies and were moving eastward over Nebraska and Northern Iowa. The temperature averaged about 6° below normal during this period.

The greater portion of the month's rain fell during the period 20th through 27th, mostly in the form of scattered thundershowers. This condition led to adjacent counties reporting too dry weather for crops, and the other reporting too wet.

Crops in general fared well throughout the month, except for cotton being retarded slightly by the cool nights from the 13th to the 17th.

TEMPERATURE

The average temperature for the month was 76.7°, or just 0.4° below the 57-year average. Prescott reported the highest average with 79.8°, 0.6 above their average. Turnpike had the lowest average with 71.6.

Booneville reported the highest temperature of the month with 101° on the 30th; Blytheville was second highest with 100° on the 12th. The low temperature for practically all stations in the State occurred on the 14th, and ranged from the forties to the low fifties. The lowest was 44°, and was reported by 6 different stations.

PRECIPITATION

The State's average rainfall for the month was 3.88 inches, 0.21 inch below the 57-year average. The reports from the individual stations show that the monthly totals covered a wide range from a low of 0.50 inch at Oden to a high of 10.27 inches at Cummins Farm. The greatest 24-hour fall was 5.66 inches at Marked Tree on the 22nd.

Light hail was reported in several widely scattered thundershowers, but the only damage reported was at Walnut Ridge on the 25th (see Storms).

Summary Continued on Page 34

(Continued from Front Page)

RIVERS

The rivers of the State were all falling at the beginning of the month, with only the Lower White River, Clarendon and below, at bankful stage. By the end of the month, the stages of all the rivers were near the low summer averages, with the exception of the Upper Black. Near bankful stages were reported on the Black River near the Arkansas-Missouri line at the end of the month, but no damage was reported.

STORMS

Several storms during June extracted a heavy toll, with 36 killed, 300 injured, and near a million dollars in property damage. The first storm, in the form of a violent tornado, struck the agricultural section just south of Pine Bluff about 3:20 p.m. of June 1. The toll in this tornado was 35 killed, 300 injured, 500 homeless, and final estimates place property damage near $1,000,000.00. General thunderstorms occurred over the northeast section of the State on the afternoon of June 25. During these storms, Ernest F. McAdams, of Bradford, was killed when struck by lightning near Worden; $2,000.00 damage was caused to business property in Walnut Ridge by wind and hail, plus numerous shade-trees destroyed. Scattered thunderstorms occurred on June 26, with damage reported by two cities: North Little Rock reported property damage totaling $5,000.00, and one person injured; Paragould reported property damage of $3,000.00. Property damage at these places was caused by winds.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. LII — Little Rock, Ark., July, 1947 — No. 7

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The month of July was marked by temperatures and rainfall below normal. This was the second coolest July in Arkansas in 32 years and the seventh coolest on record. Temperatures showed wide extremes with readings near the record low about the 23d and near the record high at the close of the month. The month opened with moderately cool weather and temperatures were below normal at most stations the first 12 days of the month. This was followed by a week of daily mean temperatures a few degrees above normal, but by the 19th another cool wave overspread the State giving near record low temperatures throughout the State by the 23d. The lowest July temperature on record is 40° at Corning on July 1, 1924 while 41° was recorded at Paragould on July 23d this year. By the 25th temperatures had returned to normal or above and the last week of the month brought temperatures of 100° or higher in practically all sections, the highest for the month occurring on the 31st.

Scattered showers occurred on the 1st and 2d, the 6th and 7th, from the 15th to the 18th. Thereafter showers were irregular. Amounts were uniformly light to moderate with only a few stations having 24 hour totals exceeding an inch. By the close of the month soil moisture was depleted in western and central sections of the State, but crops had not suffered seriously in lowland counties.

The month as a whole was favorable for cotton. The warm dry weather held insect damage in check. The cool nights around the 23d of the month retarded fruiting somewhat, but the following warm weather was favorable. A good corn crop is in prospect over the eastern and northern counties, but corn deteriorated in the drier areas of the State. Rice did well throughout the month and at the close of the month early varieties were nearing maturity. Dry weather reduced the quality and the quantity of Elberta Peaches. Cantaloupes, cucumbers, and watermelons were being marketed at the close of the month, these too being damaged somewhat by dry weather. Soybeans continue to promise good yields.

A destructive hail storm in eastern Craighead County Monday evening July 14 damaged 1,000 acres of cotton and other crops in excess of $100,000.

TEMPERATURE

The mean temperature for the month of July, as determined from the records of 73 stations, was 78.3° which is 2.2° below the 57 year average. The highest monthly mean was 81.8° at Booneville, Camp Chaffee, Hot Springs and Prescott. The lowest monthly mean was 75.0° at Harrison. The highest temperature recorded during the month was 109° at Gilbert, Booneville and Lead Hill on the 31st. The highest occurred throughout the State at the close of the month and all stations except Helena, Marianna, Paragould, Turnpike and Wilson had 100° or higher. The lowest temperature recorded during the month was 41° at Paragould on the morning of the 23d. The lowest occurred in all sections about this date and at many stations the readings on the morning of the 23d were near record low for July.

PRECIPITATION

The average rainfall for the month of July, 87 stations reporting, was 1.25 inches, which is 2.42 inches less than normal. This was the third driest July on record in Arkansas. July 1930 with an average of 0.74 inch was the driest and July 1943 with an average of 1.13 inches was next. Monthly totals ranged from 4.66 inches at Paragould to 0.10 inch at Warren. There were 40 stations with monthly totals less than an inch, 20 with less than half an inch and 8 with less than a quarter of an inch. The greatest 24-hour amount was 3.10 inches at Paragould on the 7th. The average number of days with 0.01 or more rainfall was 3.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2] Measured in the morning for the preceding 24 hours. [3] Data for 24 hours ending at 12:30 a. m. of the following day. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning temperatures are for 24 hour period ending at time of observation. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 1, Mt. ARKANSAS SECTION

WALTER C. HICKMON

VOL. LII LITTLE ROCK, ARK., AUGUST, 1947 No. 8

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

August weather over Arkansas was dominated by high pressure systems centered over the eastern States. These HIGHS were relatively weak, but strong enough to maintain southerly to southwesterly winds over the State.

The southerly winds were dry and hot, having passed over the plains and mesas of the Southwest. This resulted in the fourth hottest August of record, and also a relatively dry one. In fact, portions of the State suffered from a severe drought.

Several weak cold fronts, associated with LOWS moving eastward over the Great Lakes, passed over the State from the 7th to the 20th. Widely scattered light showers occurred with the passage of these fronts, but were mostly too light to be of material value to crops and pastures.

A LOW moved into the western portion of the State on the 26th-27th, from the Texas Gulf Coast. This LOW brought drought-breaking rains for that portion of the State from Texarkana to Mena(See Flood below).

All crops suffered during the month, both from lack of rain and continuous hot weather. The average of all the stations in the State shows that temperatures of 90°, or higher, occurred on 30 days of the 31. Even cotton, which usually thrives with hot weather, suffered, and yield prospects reduced considerably. Most corn was "made", except for late plantings, before the drought set in.

TEMPERATURE

The mean temperature for the month was 84.5°, 4.3° above the 57-year average. Prescott reported the highest mean of the month with 87.8. Hot Springs was second with 87.4°. Every station in the State reported means well above the 57-year average. Harrison reported the lowest mean with 81.7°, which was 3.9° above their average.

The highest temperature of the month was 111°, reported by Conway on the 31st. This is not a record for either the State, or Conway. Conway's record high was 115° on August 10, 1936, and the State's record high was 120°, reported by Ozark on the same date. The lowest temperature of the month was 56° at Perryville on the 16th.

PRECIPITATION

The average precipitation for the State was 2.20 inches, 1.33 inches below the 57-year average. The average has been lower than this on ten occasions, but at the same time, it does not give a true picture of the drought situation. A good example is the average precipitation for all stations north of the Arkansas River was 1.15 inches, just 2.90 inches below the average for that section.

For a more complete picture of the drought over the State (except the southwest), the individual monthly rainfall totals ranged from .16 at Mountainburg, .17 at Blytheville and Conway, to 11.53 inches at Grannis in the southwest. These high totals in the southwest run the State average out of proportion to the true picture.

Grannis reported the greatest 24 hour fall with 10.03 inches on the 28th. This fall actually occurred in a period of 11 hours from 7 pm of the 27th to 6 am the next morning. De Queen reported 6.71 inches on the 28th.

Summary Continued on Page 46

FLOOD

The heavy rains(Grannis, 10.03 inches; De Queen, 6.71; Horatio, 6.65; Cove, 9.50; Mena, 4.78; Okay, 4.15) on the 27th-28th, caused a rapid rise on the Little River, reaching stages slightly above flood stage. Damage reports are not complete from the flood, but damage was considerable and mostly due to washouts of highways and bridges over small streams, plus erosion. Several washouts were reported on the KCS Railroad. Many crops were washed out of the ground. J.C.H.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. ^{1} Midnight to midnight. ^{2}Measured in the morning for the preceding 24 hours. ^{3}Data for 24 hours ending at 12:30 a. m. of the following day. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning temperatures are for 24 hour period ending at time of observation. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 1, Mt. ARKANSAS SECTION

WALTER C. HICKMON

Vol. LII   Little Rock, Ark., September, 1947   No. 9

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The weather map for the first ten days of the month resembled a mid-summer map, with a relatively stagnant air mass over Arkansas. These conditions gave a few scattered showers and plenty of hot weather.

Numerous heat records, both for individual days and the month of September, were set. Thirty stations in the State set new September high temperature extremes. The stations are: Batesville, Bee Branch, Bentonville, Blytheville, Conway (highest in the State, 112°), Dardanelle, Des Arc, Devil's Knob, Fordyce, Gilbert, Green Mountain, Hot Springs, Lead Hill, Little Rock, Lutherville, Monticello, Morrillton, Newport, Nimrod Dam, Ozark, Perryville, Pocahontas, Rogers, Russellville, St. Charles, Sheridan, Siloam Springs, Stuttgart Rice Experiment Station, Turnpike, and White Rock.

A LOW began to develop over the eastern slope of the Rockies about the 9th; the LOW moved toward the northeast. The cold front and squall line associated with this LOW moved in over Arkansas about the 11th, giving moderate showers and slight relief from the heat. The cool mass of air behind the front had lost most of its punch in its passage over the hot plains to the north and northwest of Arkansas.

Another cold mass of air moved over the State on the 14th to 16th, giving light showers on mixing and lifting of the moist tropical air then over the State.

On September 18, a Hurricane began to move in on New Orleans from the Gulf, and then inland toward southwest Arkansas. The combination of a cool air mass moving in from the north, and the remnants of the Hurricane gave Arkansas the first definite relief from both the heat and dry weather. This storm accounted for more than half the month's rainfall.

Autumn was ushered in on the 23d with unusually cool weather running from 10° to 15° below normal. Several stations over the State reported low records equalled, or even lowered for this particular date. Practically all stations in the State reported their lowest temperatures for the month on the 23d also.

The temperatures were below normal for the last 10 days of the month, and this was the longest period of below normal temperatures since last March.

Agricultural work progressed rapidly during the month, due to the long periods without rain. The crops, still in the fields, benefited from the moderate to heavy rains that did occur, and raised the yield estimates, which were originally based on drought conditions.

There were no floods, or severe storms, in the State during the month.

TEMPERATURE

The September average temperature was 76.0°, 1.7° above the normal. This near-normal figure is somewhat misleading, considering the fact that 30 stations set new high records for September during the first 10 days; then during the last ten days, temperatures were well below the seasonal average.

The highest September temperature reported was 112° at Conway on the 1st; runners-up were Fordyce, Lead Hill, Ozark, and Russellville with 110°. The highest mean of the month was 79.6°, reported by Prescott. Only two stations remained under the 100° mark throughout the month: De Queen and Grannis.

PRECIPITATION

The month was slightly below normal in precipitation with 3.28 inches, 0.05 inch below the normal. Most of the stations in the alluvial section reported deficiencies, some more than 50%, while practically all those in the mountainous section were above normal.

Oden reported the greatest monthly total with 7.50 inches, which is more than twice their normal fall. Osceola, across the State, reported the least with 0.70 inch. The greatest 24 hour fall, 4.00 inches, occurred at Stuttgart on the 21st. Most of the stations in the State reported their greatest 24-hour amounts on the 20th and 21st.

Hail was reported in thunderstorms at Crossett on the 7th; Oden, 8th; and Mammoth Springs, 10th. No damage was reported.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning temperatures are for 24 hour period ending at time of observation. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott; Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 1, Mt. ARKANSAS SECTION

WALTER C. HICKMON

Vol. LII Little Rock, Ark., October, 1947 No. 10

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents. Washington, D. C.

GENERAL SUMMARY

The month of October started out, more or less, in reverse and had its coldest day on the first; then warmed up to the point where it was the warmest October of record.

The first 16 days of the month were relatively dry as far as rainfall was concerned. During most of this period, Arkansas was on the western side of HIGHS centered over the Atlantic Coast. This resulted in a southerly flow during the period.

A weak upper Cold Front moved over the western edge of the HIGH on the 4th and 5th, causing scattered thundershowers on those days. The total rainfall during the showers was small, except for a couple of stations reporting 2.00 inches, or more. Marked Tree reported the greatest with 4.10 inches on the 4th.

A weak LOW developed over Southern Texas on the 16th and began to move NNE. This movement resulted in light to moderate rains over the State on the 17th and 18th.

During the last 9 days of the month, Arkansas was the mixing area for small Cold Masses of Air moving in from Canada, and moist tropical air moving north from the Gulf area. This period accounted for almost 80% of the month's rainfall.

October 1947 was a most favorable month to agriculture. The first half of the month was dry enough to permit rapid harvesting of matured crops, particularly cotton, then the latter half was sufficiently wet to see many crops, such as pastures, winter grains, and berries, in improved condition for the competition with the approaching winter. No killing frosts were reported during the month.

The only storm damage reported during the month was at Weiner, Arkansas. Lghtning struck an oil storage tank during a thunderstorm on the afternoon of the 26th. The tank, 10,000 gallon capacity, exploded when struck and set fire to three similar tanks. The top of the exploded tank landed in the middle of the Main Street of Weiner, 900 feet distant. No one was injured; damage was estimated at $12,000.00.

There were no floods during the month, except for a local heavy rain at Grannis on the 17th. 6.22 inches of rain fell during the day, with hail reported five times during the day. No damage was reported from this rain.

TEMPERATURE

October 1947 set a new record for the warmest month. The mean temperature of 68.3°, 5.4° above the 57-year average, exceeded the previous record by just 0.1°.

For the State as a whole, the first day of the month was the coldest. The lowest temperature reported on this date was 37° by Batesville Livestock Experiment Farm, Bethesda, and Gilbert. 35°, however, was the lowest for the month and occurred at Harrison on the 29th.

The highest temperature was 95° and occurred at Newport on the 14th. More than two-thirds of the reporting stations had highs in the nineties, and most stations reported their highest on the 14th.

Fordyce reported the highest monthly mean with 72.2°, and Magnolia was a runner-up with 72.1°. Mammoth Spring had the lowest average with 63.0°, but still 3.1° above that station's average.

PRECIPITATION

The average precipitation for the State was 3.73 inches, 0.56 inch above the 57-year average. Even though the State's average is above the normal, numerous stations failed to receive even two-thirds of their normal. Those stations having a deficiency in precipitation are mostly on the northern slopes of the mountainous sections, and a few near the Mississippi River.

The area of heaviest rainfall falls on a line drawn through Prescott toward the NE through Little Rock, Searcy, and ending at about Paragould. This line is actually the boundary between the Alluvial Section, and the Mountainous Section of Arkansas. Many stations through this area reported falls double their average. The wettest area is from Augusta to Marked Tree, where the fall ranged from 8.00 to almost 9.00 inches.

Stations on the northern slopes of the mountains were deficient in rainfall and most reported only one-third to one-half their normal amounts. Rogers reported the lowest with 1.05 inches, 2.44 inches below normal.

Augusta reported the greatest monthly amount with 8.91 inches. Grannis was second with 8.37 inches. Grannis also reported the greatest 24-hour fall with 6.22 inches of rain on the 17th. Considerable hail accompanied this heavy rain. J.C.H.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2] Measured in the morning for the preceding 24 hours. [3] Data for 24 hours ending at 12:30 a. m. of the following day. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning temperatures are for 24 hour period ending at time of observation. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould: Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill: Rosebud, Route 1, Mt. CLIMATOLOGICAL DATA

3 ARKANSAS SECTION

WALTER C. HICKMON

VOL. LII LITTLE ROCK, ARK., NOVEMBER, 1947 No. 11

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

With the approach of Winter, the rapid changes of weather characteristic of that season began to make their appearance. The first 24 days of the month were the more unstable, with alternate short periods of rain and fair weather, setting a new record for the greatest number of days with rain in November.

The rapid changes were brought about by the movement of numerous storm centers (LOWS) over Arkansas, or the States bordering Arkansas. The Cold Masses of Air to the rear of these storm areas maintained sufficient cold to cause a deficiency of almost 4° at the end of the month.

The month's weather was very favorable to winter-grains, berries, pastures, and other winter crops. Preparation of fields was delayed until near the end of the month, as well as the picking of a small percentage of the cotton crop, which still remained in the fields.

Killing frosts were reported from practically all stations in the State on November 12, marking the theoretical end of the growing season. The last general Killing Frost in Spring occurred on April 17; which gives the State a growing season of about 208 days for 1947.

There were no severe storms, or floods, during the month. Numerous local thunderstorms were reported and one death by lightning was reported. Mrs. Kate Owens, of near Van Buren, was struck by lightning on the 4th. The report states that she was rendered unconscious, and then fell into a pool of rainwater and drowned.

TEMPERATURE

The average temperature for the month was 47.7°, 3.6° below the 57-year average. There were no radical extremes in temperature, and the deficiency was due more to the lower daytime temperatures than to the actual minimums.

The highest temperature for the month was 82°, and was reported by both Ashdown and Camden on the 1st. Crossett reported the highest average temperature for the State with 52.3°. Even this temperature was 1.5° below their average.

The lowest temperature for the State, 17°, was reported by Harrison on the 30th. Lead Hill reported the next lowest with 18° on the same day. Mammoth Spring again reported the lowest mean for the month with 43.4°, 4.9° below their average.

There were only five days during the month that the temperature was above the normal.

PRECIPITATION

November 1947 was the rainiest November of record for Arkansas, even though it was not the wettest. The average number of days with .01 inch or more, was 11; the previous high was 10 in 1946; and the normal is 6 days.

November's average for the month was 5.06 inches, 1.21 inches above the 57-year average. Stations in the Alluvial Section of Arkansas reported 40% to 100% above November Normal, while those in the Mountainous areas were just about normal, or below.

Fordyce reported 9.18 inches for the heaviest November fall, and Fort Smith 2.28 for the lightest. The greatest 24-hour fall was 3.81 inches at Camden on the 22nd.

Only 4 stations reported any snow during the month, and then it was only a trace, an amount too small to measure. Hail was reported on 4 days; no damage was reported. J.C.H.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LII LITTLE ROCK, ARK., DECEMBER, 1947 No. 12

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Relatively high pressure prevailed over the State during most of the month, with centers of HIGHS over the Eastern States the greater portion of the time. The location of these HIGHS permitted a southerly flow of air, giving the State a slightly warmer December than usual.

Two LOWS, one in Oklahoma and one in Colorado, developed and moved northeastward during the period 3d through 10th. The Cold Fronts associated with these LOWS, moved across Arkansas giving showers to every station in the State for an average of five days out of the eight.

New cold air moved in over the State starting the 14th, giving the State two days of showers and the coldest period of the month.

The period from the 17th to the 30th was almost free of rain, and was the warmest part of the month. Many local records for high temperatures for the 29th, 30th, and 31st were broken. This period of temperatures, way above normal was just setting the stage for a series of tornadoes that struck the State New Year's Eve (See Tornadoes).

Although the precipitation for the month was practically normal, the agricultural outlook in the extreme northwest portion of the State was dim, due to lack of subsoil moisture. Several stations in that section reported deficiencies of 50% to 60%. Most stations in the mountains south of the Arkansas River reported excesses, some up to 100%.

There were no floods during the month, but the heavy rains, that accompanied the weather causing the tornadoes, started rises that ended in floods in the Ouachita Basin in 1948.

TEMPERATURE

The mean temperature for December was 44.2°, 1.4° above the 57-year average. The highest temperature reported was 78° at Okay on the 28th. Practically every station in the State reported temperatures in the 70s during the last 5 days of the month. The lowest was 10° at Gilbert on the 25th. Lead Hill reported 11° on the same day. Most stations reported their lowest temperatures on the 14th.

PRECIPITATION

The average precipitation for December was 4.22 inches, just 0.01 inch below the 57-year average. Again the mean did not give the picture of the rainfall over the State. Precipitation over the Alluvial Section was deficient, while most of the Mountainous Section was considerably above normal. Only Benton and Carroll Counties were extremely low, and subsoil moisture in those counties was described as too small to maintain crops in the coming season, unless abnormal amounts fell before Spring.

The greatest monthly amount was 8.52 inches at Mt. Ida, and the lowest 0.94 inch at Bentonville. The greatest 24-hour fall was 3.59 inches at Batesville on the 31st. Green Mountain reported the greatest amount of snow for December with 4:5 inches.

TORNADO

A series of tornadoes moved across the State during the late aternoon and evening of December 31. The first tornado began at Gillam (Sevier County) about 4:00 pm, and apparently moved NE, making its last contact at Oxford (Izard County).

The second tornado had its origin near Shreveport, Louisiana,

(Continued from Front Page)

about 4:00 pm, and moved into Arkansas at Three Creeks (Union County). This storm also damaged property at Strong and a small community just south of El Dorado.

The third tornado began south of Magnolia(Columbia County) at about 7:45 pm, and moved northeast across the State, making contacts at Village, Mt. Holly, Smackover, Gethsemane(Jefferson County), Marianna to Brickeys(Lee County), and Marion(Crittenden County). A tornado was reported in Tennessee shortly after the last contact in Arkansas, and the points hit were directly in line with the path in Arkansas.

The third tornado caused the greatest damage in the State, and also the only deaths. The toll for all three tornadoes is as follows: Two killed, 99 injured, 85 homes damaged, or destroyed, 1 gymnasium destroyed, 10 oil rigs damaged beyond repair. Total monetary loss $215,500.00.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning temperatures are for 24 hour period ending at time of observation. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio: Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1. CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LII   LITTLE ROCK, ARK., YEAR, 1947   No. 13

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D.C

GENERAL SUMMARY

Temperatures over most of the year were comparatively mild for their season, and did not get out of line, except for the months of August, September, and October. September came to the front by breaking more than 30 individual station records for high temperatures. October was the warmest October of record.

Eight persons were reported to have died of heat-stroke during August and September; several more were killed during those months when struck by lightning.

The average temperature for 1947 was 60.8°, 0.6° below the 57-year average. The extremes of 112° in September, and the —4° in January were far less severe than the 120° and —29° recorded in previous years.

Precipitation during the first three months was 6.69 inches below normal, and accounts for most of 7.80 inches deficit at the end of the year. Only 4 stations, Arkansas City, Crossett, Grannis, and Prescott reported an excess in precipitation for the year. Of these, Grannis reported the greatest amount with 61.42 inches.

The lack of precipitation in January, February, March, and then July and August definitely cut the final yield of all crops. Several crops, particularly tomatoes, were practically eliminated by the drought.

The average Precipitation for 1947 was 40.65 inches, 7.80 inches below the 57-year average. This was the fifth driest year of record. The record low was the drought-year of 1936 with 34.75 inches.

RIVERS IN 1947

Floods were minor during 1947 and little damage was reported.

TORNADOES IN 1947

Several widely scattered tornadoes and severe thunderstorms occurred over the State during the year, with accumulated loss as follows: 52 killed, 496 injured, and monetary damage of $2,045,980,00. See weather by months for breakdown.

WEATHER BY MONTHS

JANUARY temperatures were slightly above normal, and compartively mild throughout the month. The lowest reported was —4° by Gravette on the 4th; this was also the lowest for the entire year for Arkansas. Precipitation was about half of normal, but crops were in good condition due to heavy rain in November and December of 1946. A tornado hit North-Central Arkansas on the 29th, injuring 12 and damaging property $168,480,00.

FEBRUARY was the sixth coldest of record, and the second driest. These two factors resulted in considerable damage to

winter grains and berries.

March continued the dry and cold weather of February and became the second coldest March in 57 years. The precipitation was 57% of normal, but fairly well distributed over the month. Considerable farm work was accomplished.

APRIL'S weather was just about normal, with both temperature and precipitation slightly above the average. Minor flood occurred about middle of the month, and again at the close. Thunderstorms and tornadoes resulted in the deaths of 9 people and injury to more than 50; monetary damage was approximately $350,000.00. April was the most favorable to Agriculture, in spite of slight damage to Cotton and Corn. Killing frost occurred at many stations on the 17th.

May was about an average month, with all farm operations progressing nicely. Thunderstorms were general over the State on the 1st. The Northeast portion was hit hard by these storms; one person was killed and 35 injured, monetary damage was $200,000.00. Two persons were killed by lightning during the month.

June was another near-normal month as far as temperature and precipitation were concerned. Crops fared well, except Cotton was retarded slightly by the cool nights from the 13th to 17th. Several storms struck the State during the month killing 36, injuring 300, and monetary damage of more than a million dollars. The worst of these was a tornado near Pine Bluff on the 1st.

July was below the average in both temperatures and rainfall, and was favorable to only one crop, Cotton. Fruit and vegetables suffered the most from the dry weather. A hailstorm occurred in Craighead County on the 14th doing $100,000.00 damage to Cotton. Two were killed by Lightning during the month.

August continued the shortage of rainfall, and also became the fourth hottest August of record. This combination was damaging to all crops. All stations in the State, except Turnpike with 99°, reported a number of days with temperatures above the 100° mark. Minor floods occurred in the southwest corner of the State at the close of the month.

September brought the hottest weather of the year, with the breaking of long-standing records at more than 30 stations during the first 10 days. Rainfall was near normal again, and crops benefited accordingly.

October started out cool and ended up as the warmest October of record. Precipitation was also above normal and was very encouraging as far as 1948 crops were concerned. Lightning caused some damage at Weiner on the 26th.

NOVEMBER was a little cooler than usual, and the rainiest of record (greatest number of days with rain), but not the wettest. The month was very favorable to winter grains and pastures. Killing frosts were general over the State on the 12th.

DECEMBER was a near normal month in both temperature and precipitation. The latter part of the month ended up with the warmest days, heavy rains, and a series of tornadoes. The tornadoes, on the 31st, resulted in 2 deaths, injury to 99, and $215,500.00 damage.

J.C.H.

The departures from normal temperature and precipitation are computed from averages of the entire period for stations having 10 or more years of record.

T., less than 0.01 inch rain or melted snow. Reference letters a, b, c, appearing in the table indicate number of days missing. § Also on later dates.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LIII LITTLE ROCK, ARK., JANUARY, 1948 No. 1

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

January 1948 turned in a very disastrous report for itself. Two concurrent weather factors were responsible for this; first, the continuous cold weather of the latter half of the month; second, the fairly continuous snows, sleet, and rain during the same period causing a glaze storm over the entire State.

The continuous cold coupled with the various types of precipitation resulted in ten to twenty millions of dollars of damage to the highways and roads of the State. Final figures probably will not be known until Summer. The constant night freezing and slight thawing in the daytime caused heaving of paved roads, and almost complete disappearance of some gravel roads. Then to completely stop traffic the last week of the month, what travelable roads were left became covered with a thick coat of snow, sleet, and glaze.

The glaze storm which began Janauary 26th, hit the two southern tiers of Arkansas Counties the hardest. All communications, power, and transportation were out for most of the last week of January with damage estimated as follows: Utilities $1,000,000.00; Forest damage between five and ten millions of dollars. The final figures for loss over the State is going to run close to $20,000,000.00.

In addition to the monetary losses, comes the loss of life, due indirectly to the cold and ice. These deaths total 29 over the State, and were due to falls on the ice; auto accidents on the ice; and fires. Several hundred fractures were reported over the State, with more than one hundred reported in Little Rock alone.

This January has been compared with the severe winters of earlier years, 1905, and in the latter part of the Nineteenth Century, but indications are that more suffering occurred this year because of the complete stoppage of all modern conveniences in communities. Even gas for heating was cut off in some areas due to break in lines. Many factories, local businesses, and schools were closed because of limited gas supplies.

Communications in many of the southern cities of the State were completely out, except for an occasional amatuer, or Naval Reserve, Radio Station.

Amount of farm work accomplished reached a new low, with the only activities being butchering, wood-cutting, fence-work, and other similar work. Subsoil moisture continues low and practically every station in the State showed deficiencies in precipitation for the month. There were no serious floods during the month. Minor floods did occur on the Ouchitia and Black Rivers, with little damage due to the season of the year. Considerable livestock was removed to higher ground due to warnings.

TEMPERATURE

The mean temperature for January 1948 was 33.5°, 7.6° below the 58-year average. This is the fourth coldest January of record, and the coldest since 1940. No new records for extreme low temperatures were set, but the continued low temperatures during the latter part of the month brought the average down.

The lowest for the month was —7°, reported by Marianna on the 18th. Eleven other stations reported zero, or below, during the month. The month's high of 77° was reported by the Stuttgart Rice Branch Station on the 9th.

PRECIPITATION

The average precipitation for the month is shown as 3.32 inches, 0.93 inch below the 58-year average. Actually this deficiency is nearer 2.93 inches, since the rains that are credited to January on the first actually fell on New Year's Eve night. These rains were hard and the runoff rapid, adding little to the subsoil moisture (See Tornado, December 1947).

The Precipitation that fell from the 9th on, fell mostly as sleet and snow. The fall was well distributed over the remainder of the month. The average snow for the month was 5.0 inches, or 150% above normal, but still a long way from the record average of 17.6 inches in 1918. The greatest January 1948 snowfall was 21.5 inches reported by Stuttgart, and 16.2 inches reported by Helena. Both are low compared with the record of 48.0 inches set by Calico Rock in 1918. Perryville reported the least precipitation during the month with 0.43 inch, 3.97 inches below the average; Mena reported the greatest with 7.69 inches, 6.80 of this fell in less than 24 hours and on New Year's Eve.

Daily Temperatures for January, 1948

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LIII LITTLE ROCK, ARK., FEBRUARY, 1948 No. 2

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

There were no extremes in weather during February, but there was a general collection of bad weather. Agriculture did benefit from the well-distributed above normal precipitation, which bolstered the sub-soil moisture considerably.

February, 1948 made a record for itself by having the greatest number of days with measurable precipitation for all February's of record. It was not the wettest, but did average more days with measurable precipitation, with a total of 13 days. The previous record was 12 days, in 1939 and 1944.

The atmospheric pressure over Arkansas during the month was relatively high, and during the first 15 days, there was an almost continuous movement of cold air masses from Canada into this section. This maintained the pressure and, at the same time, kept the temperatures low.

There was an average of about 10 days precipitation during the first 15 days of the month, and it was the result of the mixing of the new cold air masses with the warmer air over Arkansas. Another period of precipitation prevailed from the 21st through the 27th. The latter part of this period was the result of the passage of a LOW over the State.

As mentioned before, Agriculture gained considerably by the replenishing of the sub-soil moisture, but at the same time, farm work was limited to such things as butchering, wood cutting and fence repair. The weather was too cold and too wet for any amount of ground preparation for spring planting. Winter grains and pastures were in excellent condition at the close of the month.

The weather hampered Commerce and Travel throughout the month. The continued cold and precipitation kept the highways and roads covered in snow, ice, slush and mud, which began in the last week of January. One person died from exposure near Conway.

There were minor floods on the Petit Jean, Ouachita and Lower White Rivers during the month. Damage was slight, due to the time of year, and loss was mostly due to necessity of moving cattle from pastures along the rivers. A few cattle were lost.

TEMPERATURE

February's average temperature for the State was 41.5°, 2.1° below normal. Portland and Crossett reported the highest averages, with 47.4°, and the lowest was along the north border at Mammoth Spring, with 35.7°

The lowest temperature during the month was 8° at Gravette, on the 14th. The highest was 82° at Okay, on the 29th. All stations in the State reported highs in the upper 70's during the period 17th to 19th. Several stations set new record highs for individual days during this period.

PRECIPITATION

The average precipitation for the Month was 6.08 inches, 2.54 inches above normal. The precipitation was well distributed over the Month, and no exceptionally heavy falls occurred at any one time.

Only two stations, Paragould and St. Francis, reported below-normal preceipitation. The greatest monthly total occurred at Clarendon, 11.15 inches. Gravette reported the lowest total, with 3.04 inches, which is 0.84 inch above their normal. Snowfall was normal for the State, with 1.8 inches.

Summary Continued on Page 10

(Continued from Front Page)

The heavier snows were not confined to any one section: Bentonville reported a February total of 8.0 inches; Cummins Farm, 5.5 inches; Eureka Springs, 5.7 inches; Grannis, 8.0 inches; Hope, 6.0 inches, and Prescott, 8.0 inches.

As noted before, February, 1948 set a new record with a 13-day average of measurable precipitation. Mena reported 19 days, for the highest in the State.

Moderate glaze covered the north half of the state on the 11th, and covered the entire State on the 20th, 21st. Very little damage was reported from these two glaze storms; mostly traffic delays and inconvenience. J.C.H.

Daily Temperatures for February, 1948

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LIII   LITTLE ROCK, ARK.,   MARCH, 1948   No. 3

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

March, 1948, followed the pattern of January and February in being an unusual month. March turned in some of the coldest weather experienced during the current winter, and also set numerous low records for temperature in the northwest quarter of the State. In addition to being unusually cold over the northwest quarter, the snowfall during the same period was the second heaviest of record, in comparison with the unusually heavy March snows of 1924.

The lowest temperature recorded during March was 14° below zero, and was reported by two stations - Gravette and Lead Hill. These low temperatures occurred on the 12th of March, and the lows over the state occurred generally near this date.

The average snowfall reported for the state was 1.4 inches, and this is about one inch above the normal for the entire state. Three-fourths of the stations in the state reported less than 0.1 of an inch of snow, and the northwest quarter accounts for the high average for whole state. The heaviest snowfall reported for the month was 14.8 inches by Rogers. Siloam Springs reported the next heaviest, with 13.7 inches.

The precipitation was well-distributed over the month, and ranged from a low of less than inch at Green Mountain, to more than eleven inches at Fordyce. The alluvial section of the state received the heaviest rains, and they ranged from six inches to slightly over eleven inches. The driest portion of the state would fall along a line drawn from about Grannis to Mt. Home, and the fall in the counties along this line will run from two to three inches. The northwest counties - Benton, Carroll and Washington, received five to seven inches of precipitation.

Agriculture fared well throughout the month by the distribution of rainfall, although very little preparation for spring crops was accomplished. The extreme cold weather around the 12th damaged peaches considerably in the northwest portion, and around the Nashville peach area.

Minor floods occurred on all rivers during the month, but were primarily of a nuisance character, since no crops had been planted in the flooded sections. Most of the damage was due to delay in preparation of graund for spring crops. Several thousand head of cattle and hogs were removed from the flooded areas due to warnings issued. The most serious of the floods occurred in the Ouchita Basin, where several thousand acres were inundated between Camden and Huttig.

TEMPERATURE

The average temperature for March, 1948, was 50.6°, 1.9° below normal. The highest temperature reportod during the month was 89° at Perryville on the 20th. The lowest temperature was —14°, by both Lead Hill and Gravette. This is the lowest temperature ever reported for the Month of March in Arkansas. Practically all of the stations in the northwest quarter of the state broke the lowest temperature records for March. The previous low record for March was —6°, in 1943. Mammoth Spring again reported the lowest mean temperature of the month for the state, with 44.8°, 5° below their normal. The highest mean for the month was reported by Magnolia, with 58.9°, 2.4° above their normal.

PRECIPITATION

The average precipitation for March, 1948, was 5.72 inches, 0.96 inch above the 59-year average. The precipitation for the month ranged from a total of 0.96 inch at Green Mountain, to 11.48 inches at Fordyce. The rains, as mentioned before, were well distributed, and occurred on an average of 10 days during the month. This is two days above the 50-year average. The heaviest 24 hour rainfall was 4.60 inches, at Fordyce on the 22nd.

TORNADOES

A small tornado, apparently originating in Hughes County, Oklahoma about 8:30 P.M. on March 25, moved into Crawford and Washington Counties, in Arkansas shortly before midnight of March 25. Damages repoted from this tornado totaled about $14,000. Three homes were destroyed, as well as two barns. At about the same time this tornado struck, severe thunderstorms were also reported at Booneville and Caulkesville in Logan County. Total damages in that area are estimated at $5,000. Thunderstorms occurred over central Arkansas on March 30, causing damage of about $5,000 at Arkadelphia and near Little Rock. No injuries were reported in any of these storms.

ADDENDUM

The zero of the river gage at Morrilton was lowered ten feet on April 7, 1948. This will result in all readings in the future being ten feet higher than comparable readings in the past. For example: the crest of the 1927 flood on the old gage was 32 feet; on the corrected zero readings this flood would have read 42 feet. This correction was necessary to eliminate many below zero readings. The old flood stage was reported as 20 feet. Under the new zero, the flood stage will be 30 feet. The Morrilton river gage readings shown in this issue of the Climatological Data have been corrected to the new zero readings.

Daily Temperatures for March, 1948

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. LIII   Little Rock, Ark.,   April, 1948   No. 4

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

April continued the trend of the first three months of the year by being out of the ordinary, and was the third warmest April of 68 years record. There were only nine days during the month that the temperatures were about normal or below. The warmest days of the month were the 7th, 18th, 19th and 27th. Several stations set individual high records for these days.

The sunshine for the month ranged from 25 to 30 per cent above normal, aiding in the above average temperature conditions. High pressure systems located along the Atlantic Coast kept a general southerly circulation of air over Arkansas most of the month. Cold air masses associated with "lows" moving northwest and north of Arkansas resulted in two general rain periods during the month-the 10th to the 13th, and 23rd to 26th. The weather attending these "lows" was relatively mild, and the month ended with a deficiency in rain.

Agricultural work made rapid progress during the month, since no general heavy rains hindered the work. The major portion of all planting was completed, and the crops were up to a good start by the end of the month. The month was too dry over the northwest counties, and crops were not developing properly.

Only minor floods occurred on the Ouachita, Black, White, and Petit Jean Rivers during the month. Damage was slight, and mostly delay in planting.

STORMS

Severe local thunderstorms occurred over the State during the evening of the 7th. The worst hit sections were at Pine Lake Camp, 10 miles south of Little Rock; Glenwood, in Pike County; Forrest City; and Round Pond, east of Forrest City.

Damage is estimated as follows: Pine Lake Section, 12 homes damaged, loss, $10,000. One person slightly injured; Glenwood, thunderstorms accompanied by hail as large as egg, damage to roofs and windows, $6,000; Forrest City, damage was mostly roofs and windows, plus one greenhouse, damage $20.000. "Donut" hail stones, about one inch in diameter, with holes in the center fell at Hot Springs for a few minutes, and caused slight damage.

A severe thunderstorm with heavy hail hit the south-central portion of the State on the afternoon of the 8th, causing damage of more than a million dollars. Union, Ouachita, Calhoun and Bradley Counties were the hardest hit, with El Dorado as the center of greatest damage. The hail damage at El Dorado alone was estimated at $1,000,000, with more than four thousand homes, and one thousand cars damaged. The hail was reported as large as "tennis balls", and some actual measurements were given as three and one-half inches in diameter. The hail at El Dorado began at 4:15 P.M., and fell from eight to sixteen minutes. Damaging hail was also reported in Johnsville, Smackover, and Stephens, with damage estimated at $100,000. Two persons were injured and several hundred chickens were reported killed.

Crop damage was negligible due to season.

Scattered thunderstorms with strong winds occurred again on the 12th over the State. During this time the Farmers Market Building at Bald Knob was levelled, and one person was killed

Summary Continued on Page 22

and two injured. Minor damage was reported from other scattered sections of the State. A boy was killed by lightning near Springdale on the morning of the 30th.

TEMPERATURE

The mean for the month was 66.2°, 4.5° above the 68-year average. This is the third warmest April of record. The highest station mean reported for the month was 70° at Magnolia. The lowest was 61.5° at Harrison. Camden reported the highest temperature, with 93° on the 28th. Gilbert reported 27° for the lowest on the 2nd. Some killing frost was reported in the Northwest section on the 2nd.

PRECIPITATION

The average precipitation for the State was 3.46 inches, 1.54 inches below the 68-year average. Stuttgart reported the heaviest fall for the month, with 6.96 inches. Green Forest reported the least for the month, 0.64 inch. Warren, Arkansas reported the greatest 24 hour fall, with 3.90 inches on the 13th. Stations in the counties bordering the Arkansas River from Ozark to Little Rock reported a near-normal fall of rain during the month, while practically all of the rest of the stations in the State were below normal. The driest portion of the State was the northwest corner, where the rain averaged less than two inches.

Numerous hail storms occurred during the month, causing considerable damage. (See "Storms")

CORRECTION to March, 1948 CD.-The date given in Line 2 under subject "Tornadoes" at lower left-hand corner of Page 16, should have been given as "March 25", instead of March 26.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. LIII Little Rock, Ark., May, 1948 No. 5

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The weather during May was comparatively mild, and the final figures show that both the temperatures and the precipitation were just about normal. The precipitation was mostly in the form of showers, so amounts varied widely over the State.

Two weak storm systems(LOWS) moved over Arkansas during the first six days of May, giving some rain at all stations for about an average of 4 days.

The major portion of May's weather came from Cold Front movements from the Northwest, and were mostly thundershowers. Squall lines were associated with many of the Cold Fronts, and the storms were found mostly along these squall lines. None of these storms were classed as severe; one was accompanied by hail, which caused $50,000.00 damage(see Storms).

Agriculture fared well during the month, although the nights were too cool for the best growth, there was a definite lack of rainfall in the Northeast quarter of the State.

There were no floods during the month.

STORMS

Ellis Greer, aged 10, was killed when struck by lightning during a thunderstorm at Robertstown(Conway County) on the afternoon of the 5th.

Heavy Hail, up to ½ inch in diameter, fell over a large area extending from near Fayetteville into Missouri the evening of the 15th. The width of the path varied up to three miles, and damage was estimated at $50,000.00 The greatest damage occurred in Washington County, and was mostly to fruits and vegetables, with some grain destroyed.

Numerous other storms occurred over the State, but little or no damage was reported.

TEMPERATURE

The May mean was 68.7°, 0.3° below the 58-year average. El Dorado reported the highest mean with 72.8°, and Turnpike with 63.2° for the lowest. The highest daily temperature reported during the month was 97° on the 24th at Fordyce; Pine Bluff was second with 96° on the 21st.

Three stations, Gravette, Harrison, and Lead Hill, reported 35° for the lowest of the month. The lowest daily temperature for the majority of the stations was recorded on the 7th.

PRECIPITATION

The State average for May was 5.15 inches, 0.09 inch above the 58-year average. The rains were not general however, and being mostly showers, gave a wide range varying from 1.44 inches at Osceola to 9.53 inches at Mena. Stuttgart reported the second highest with 9.52 inches.

The southern half of the State received above average rainfall, while the Northeast was considerably below normal and the crops were deteriorating as a result.

Two hailstorms were reported, 5th and 15th; the one on the 15th causing $50,000.00 damage(see Storms).

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning temperatures are for 24 hour period ending at time of observation. ***Post Office addresses as follows: Alum Fork Reservoir, Parou; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devil's Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg: Green Mountain, Calico Rock; Index, Route 5, Texarkana: Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry: Odell, Route 1, Canehill: Rosebud, Route 1, Mt. CLIMATOLOGICAL DATA

ARKANSAS

JUNE 1948

Volume LIII No. 6

NAT
HIST

WASHINGTON: 1948

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages -- mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U.S. Weather Bureau, Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

ARKANSAS JUNE 1948

Walter C. Hickmon, Section Director - Little Rock

GENERAL SUMMARY

The month of June, 1948 was slightly above normal with relation to both temperature and precipitation. There were no records set, however, in either extremes of temperature or rain. The details of temperature and precipitation will be found under the sections so marked below.

FLOODS

The most unusual condition brought about directly by the weather to occur during the month was the flood on the Arkansas River. The flood was strictly an upstream affair; that is, the heavy rains that caused the flood fell over the upper head waters of the Arkansas River in Kansas and Oklahoma.

Flood stages were reached and passed slightly from Ozark to Morrilton on the Arkansas River. Bankful stages prevailed from Morrilton on to the mouth. 37,970 acres of farm lands were inundated in the Arkansas Basin from Fort Smith to the mouth, causing a direct crop damage of $2,451,410, and an indirect loss to processors of the crops which were destroyed of $294,240. The principal crops which were damaged in this flood were cotton, corn, soybeans, hay and truck crops, given in the order of their importance.

The fact that this flood originated in the head waters, and not in the State of Arkansas, resulted in considerably less damage than would have occurred normally. The flood waters rose relatively slow over the inundated sections, resulting in little damage to fences, roads and fields, due to erosion.

A minor flood occurred in the White Basin, causing damage of $557,200 in the upper White and Black drainage areas. This flood did cause some damage to fields, highways and fences due to erosion, and this total is estimated at $89,100, and occurred mostly at the extreme head waters of the White and Black Basins.

STORMS

Numerous thunderstorms occurred throughout the month, but damage was relatively light, and the following is a brief resume of the storms causing damage:

A thunderstorm with hail struck Glenwood (Pike County) on the afternoon of the 6th. The hail was reported to range up to 3/4-inch in diameter, which caused damage of approximately $25,000 to crops in that area. Lightning during the same storm set fire to a residence and store in Glenwood, resulting in an $8,000 loss.

Lightning set fire to some storage facilities of an oil refinery at El Dorado on the afternoon of the 6th, resulting in $10,000 damage.

Louis Cook was killed by lightning during a light thunderstorm on the afternoon of the 8th at Solgohachia, Conway County.

A moderate thunderstorm struck Little Rock about 1:30 p.m. on the 16th. This thunderstorm was accompanied by strong gusty winds to 70 miles per hour. Damage was widespread, but not serious, and totalled approximately $20,000.

The thunderstorm that struck Little Rock on the afternoon of the 16th was one of a line of thunderstorms which crossed the state. These thunderstorms caused about $25,000 damage over the state (outside Little Rock), and was mostly to small outhouses, trees down, and power interruptions. One house was destroyed by fire after being hit by lightning near Morrilton.

TEMPERATURE

The mean temperature of the month was 77.8°, 0.7° above the 58-year average. The highest mean reported in the state during the month was 82.4° at El Dorado, while the lowest mean reported was 71.9° at Turnpike. The highest extreme temperature reported during June was 102° on the 15th, also at El Dorado. Seven other stations reported temperatures of 100° or higher during the month. The lowest temperature reported was 45° at Mount Ida and Lead Hill on the 2nd.

PRECIPITATION

The average precipitation for the month was 4.91 inches, 0.81 inch above the 58-year average. The highest monthly total during the month was reported by Walnut Grove, with 12.55 inches. Two other stations reported falls of more than 12 inches, and they were Newport, 12.15 inches, and Bradford, 12.43 inches. The rains in general fell mostly as thundershowers, with that part of the state north of the Arkansas River receiving the greater portion of the rains. The lightest monthly fall was at Camden #2 where only 0.58 inch was reported. Camden #1 reported 0.82 inch. The number of days with 0.01 inch or more was exactly normal, with an average of 8 days for the month. Light hail fell during many of the thunderstorms, but the only damage reported is shown in the General Summary above.

The following reference notes apply only to Table 7 - Daily River Stages:

Readings are made at approximately 7 a.m. (Local time). They are provisional and subject to corrections. Final and corrected stages will be published in the annual publication "Daily River Stages - Principal Rivers of the United States".

a	Obstructed by rough ice.
b	Frozen but open at gage.
c	Upper surface of smooth ice.
d	Ice gorge above gage.
e	Ice gorge below gage.
f	Shore ice.
g	Floating ice.
h	Pool stage.
i	Dry at gage.
j	Interpolated.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Data in Tables 3, 5 and 6 are for the 24 hours ending at time of observation. See the Station Index for observation time.

- \- No record.
- + And also on later dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- 6 Precipitation measured at 6-hourly intervals, no recording gage.
- 6X Precipitation measured at 6-hourly intervals, no recording gage. Daily totals for the 24 hours ending at 12:30 A.M., CST of the following day.
- M One or more days of record missing; see Table 5 for detailed daily record.
- AR This entry in time of observation column in Station Index means after rain.
- K Total includes snow which accumulated in collar of the gage during previous period, and fell into gage for this measurement.
- R Station equipped with recording gage only. All amounts in Table 3 are for the non-recording gages, except for stations with this reference.
- T Amount too small to measure.
- Z Hourly amounts from recording gage at the same site may be found in Table 4.

Data in Table 4 were formerly published in the Hydrologic Bulletin for Lower Mississippi-West Gulf. Amounts in this table are from recording gages. Traces are not shown.

ARKANSAS JULY 1948

Walter C. Hickmon, Section Director - Little Rock

GENERAL SUMMARY

Almost daily thundershowers were general during the first 15 days of the month, and were caused by the movement of minor Cold Fronts, or squall lines associated with Cold Fronts passing over Arkansas. These thundershowers totaled up to the heaviest July average rainfall since 1941; also averaged the most days of July rainfall since 1941.

Arkansas was on the back side of numerous HIGHS for most of the month, which fed relatively moist air from the south into this section, to account for both the above-average rainfall and the normal temperatures of the month. No LOWS passed directly over the state during the month.

All crops, including both field and truck, flourished during the month as a result of the favorable moisture and heat conditions. A small portion of the state did report a deficiency in rainfall, with some slight crop damage. This was confined to a narrow band, extending from Texarkana to Hardy in the north.

Literally hundreds of thunderstorms were reported during the month, but luckily, most were comparatively mild. Twenty-seven reports of high winds were received, but damage was minor in all cases except at Newport. Newport reported damage from the thunderstorm of the 17th totaling $10,000. Most of this damage was uprooted trees and partially destroyed roofs.

Reports of excessive precipitation came from Pine Bluff on the 18th and Stuttgart on the 26th, causing some monetary damage. Pine Bluff reported 2.47 inches of rain in slightly less than an hour. The storm sewers were unable to carry off this unusual flow, resulting in flooded streets, and also two bakeries were flooded, causing damages amounting to about $3,000.

Stuttgart reported a condition similar to that of Pine Bluff, with 2.02 inches of rain falling in a 35-minute period during the evening of the 26th. Streets were flooded to a depth of 20 inches, with merchants reporting damage of more than $5,000 to stocks inundated.

There were no floods on the rivers during the month. There were no reports of damaging hail, although hail was reported eight different times.

TEMPERATURES

The July, 1948 average temperature was 80.5 degrees, or exactly the same as the 58-year average. The highest temperature reported during the month was 105° at Magnolia on the 25th, and the lowest, 51° at Bethesda on the 2nd. Practically all stations in the state reported high temperatures above 95° during the month. The warmest station in the state was El Dorado, with an average temperature for the month of 84.9 degrees; they also reported a high for the month of 104°. Devils Knob reported the lowest monthly average, with 75.4 degrees. Numerous counties in the south part of the state reported that the temperatures were 90° or higher for a total of 30 or more days during the month.

PRECIPITATION

The mean precipitation for July, 1948 was 4.11 inches, 0.44 inch above the 58-year average. The month's totals ranged from 0.84 inch at Walnut Grove to 9.09 inches at Pine Bluff. The greatest 24-hour amount reported was 4.81 inches on the 27th at Cummins Farm, in Lincoln County. Runner-up was 4.10 inches on the 12th at Grannis, in Polk County.

Although the state average was above normal, about one-fourth of the counties in the state were below normal for July, and these counties were in a narrow band, extending from Texarkana to Hardy. The wettest portions of the state were the northeast counties, extending down to Scott and Yell Counties, and a section extending from Jefferson, Lincoln, Desha Counties along the Mississippi to Mississippi County. The counties along the southern border averaged about half of the normal precipitation. Precipitation, .01 or more, averaged nine days for the state, as against a 58-year average of seven. Hail was reported by eight stations.

The following reference notes apply only to Table 7 - Daily River Stages: Readings are made at approximately 7 a.m. (Local time). They are provisional and subject to corrections. Final and corrected stages will be published in the annual publication "Daily River Stages - Principal Rivers of the United States".

a	Obstructed by rough ice.
b	Frozen but open at gage.
c	Upper surface of smooth ice.
d	Ice gorge above gage.
e	Ice gorge below gage.
f	Shore ice.
g	Floating ice.
h	Pool stage.
i	Dry at gage.
j	Interpolated.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late for inclusion in this issue.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Data in Tables 3, 5 and 6 are for the 24 hours ending at time of observation. See the Station Index for observation time.

-	No record.
+	And also on later dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Precipitation measured at 6-hourly intervals, no recording gage.
6X	Precipitation measured at 6-hourly intervals, no recording gage. Daily totals for the 24 hours ending at 12:30 A.M., CST of the following day.
M	One or more days of record missing; see Table 5 for detailed daily record.
AR	This entry in time of observation column in Station Index means after rain.
K	Total includes snow which accumulated in collar of the gage during previous period, and fell into gage for this measurement.
R	Station equipped with recording gage only. All amounts in Table 3 are for the non-recording gages, except for stations with this reference.
T	Amount too small to measure.
Z	Hourly amounts from recording gage at the same site may be found in Table 4.

Data in Table 4 were formerly published in the Hydrologic Bulletin for Lower Mississippi-West Gulf. Amounts in this table are from recording gages. Traces are not shown.

Subscription Price: 15 cents per copy; $1.50 a year. (Yearly subscription includes Annual Summary). Correspondence regarding subscriptions should be addressed to the Weather Records Processing Center, Room #9, U. S. Court House, Fort Worth 2, Texas.

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages -- mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U.S. Weather Bureau, Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages -- mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U.S. Weather Bureau, Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

ARKANSAS AUGUST 1948

Walter C. Hickmon, Section Director - Little Rock

GENERAL SUMMARY

LOWS, or low troughs, covered most of the South during the first half of the month. Although no LOWS passed directly over Arkansas, the weather for the first 16 days was ruled by the weak frontal systems associated with Southern LOWS. More than two-thirds of the month's rainfall fell during this period.

During the latter half of the month, the air circulation over Arkansas was due to HIGHS located along the Atlantic Coast. This brought moist tropical air over the state, and upslope rains during the last few days of the month.

The month ended up being the coolest since 1940, mostly due to cloudiness during the afternoons; and the wettest since 1944. Temperatures generally were higher from about the 13th on, with most of the high temperatures being recorded from the 13th to 15th.

The rainfall, while above the 58-year average for August, was not too well distributed, and resulted in varying slight damage to crops. The NE and SW corners of the State suffered the most from lack of rainfall with recorded falls as low as 20% of normal.

The most seriously damaged section was from an overabundance of rain, and covered most of Benton and Washington Counties. Stations in these two counties reported the heaviest rains since 1915, when major floods caused millions of dollars damage in the White Basin. The main damage this year was to the Tomato and Grape crops.

Even though August weather damaged some crops slightly, bumper yields of most crops were in prospect for the crop-season.

STORMS

High winds were reported on a total of 13 days during the month by 38 stations, but only two were serious enough to have any appreciable damage reported. Pine Bluff reported damage of $10,000.00 from a combination of rain and wind of the afternoon of the 15th. 1.40 inches of rain fell in 35 minutes during this storm, cuasing flooding of streets and stores; a roof of a Service Garage was reported to have caved in during the rain.

A windstorm struck Forrest City during the evening of the 30th, causing widespread damage to roofs, power-lines, windows, and trees, estimated at $25,000.

Thunderstorms were reported on 26 days, with more than fifty being reported on each of the following days: 8th, 9th, 11th, 14th and 15th. Hail was reported four times, but was apparently too light to damage crops.

There were no floods on any of the main rivers.

TEMPERATURES

The mean temperature for the month was 78.0°, 2.1° below the 58-year average. Only two stations, El Dorado and Camden, reported mean temperatures above their seasonal average, and these were 0.2° and 0.1°, respectively.

There were no records set for extremes during the month, and the highest reported was 108° at Magnolia on the 13th, 107° at El Dorado on the 15th. Lead Hill reported the lowest with 46° on the 6th; Harrison also reported 48° on the 6th.

Magnolia reported the highest mean for the month, with 82.6°, and Green Mountain was low, with 73.0°. Sixteen stations reported maximum readings of 100° or more, during the month.

PRECIPITATION

The mean precipitation was 4.25 inches, 0.71 inch above the 58-year average. The distribution over the State was rather poor though; and ranged from 0.67 inch at Lake City, to 15.16 inches at West Fork.

The areas suffering most from lack of rain lay within a radius of 40 miles of Texarkana in the SW, and 100 miles radius of St. Francis in the NE. Craighead County was the driest in the State, with considerably less than an inch.

The greatest amount of rain fell along the Arkansas River, and the counties just north of it; Ashley and the eastern part of Union; Polk and Scott; and the Washington, Benton, and Madison County area. The number of days with rain ranged from 11 to 15 days in the NW portion of the State, as compared with a normal of 6 days.

The following reference notes apply only to Table 7 - Daily River Stages: Readings are made at approximately 7 a.m. (Local time). They are provisional and subject to corrections. Final and corrected stages will be published in the annual publication "Daily River Stages - Principal Rivers of the United States".

a	Obstructed by rough ice.
b	Frozen but open at gage.
c	Upper surface of smooth ice.
d	Ice gorge above gage.
e	Ice gorge below gage.
f	Shore ice.
g	Floating ice.
h	Pool stage.
i	Dry at gage.
j	Interpolated.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Data in Tables 3, 5 and 6 are for the 24 hours ending at time of observation. See the Station Index for observation time.

-	No record
+	And also on later dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Precipitation measured at 6-hourly intervals, no recording gage.
M	One or more days of record missing; see Table 5 for detailed daily record.
AR	This entry in time of observation column in Station Index means after rain.
SS	This entry in time of observation column in Station Index means sunset.
K	Total includes snow which accumulated in collar of the gage during previous period, and fell into gage for this measurement.
R	Station equipped with recording gage only. All amounts in Table 3 are for the non-recording gages, except for stations with this reference.
T	Trace, amount too small to measure.
Z	Hourly amounts from recording gage at the same site may be found in Table 4.

Data in Table 4 were formerly published in the Hydrologic Bulletin for Lower Mississippi-West Gulf. Amounts in this table are from recording gages. Traces are not shown. When hourly precipitation is missing for several days, only the first and last days are shown in Table 4.

Subscription Price: 15 cents per copy; $1.50 a year. (Yearly subscriptions includes Annual Summary. Correspondence regarding subscriptions should be addressed to the Weather Records Processing Center, Room #9, U. S. Court House, Ft. Worth 2, Texas.

CLIMATOLOGICAL DATA

ARKANSAS

SEPTEMBER 1948

Volume LIII No. 9

NAT. HIST.

FT. WORTH: 1948

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages -- mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U.S. Weather Bureau, Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

ARKANSAS SEPTEMBER 1948

Walter C. Hickmon, Section Director - Little Rock

GENERAL SUMMARY

September, 1948 was the driest September since 1928, and the third driest on record. Temperatures were also below normal, but despite these deficiencies, crops, excepting late corn and pastures, were approaching a near-record harvest.

The major portion of the rain fell during the first 10 days of the month, and was the direct result of a Hurricane moving inland near New Orleans on the 3rd. This hurricane developed into an orderly LOW and moved on NNE. The weather associated with this LOW gave light to moderate rains over the State, with near-normal amounts in the extreme NE part of the State.

A weak storm center (LOW) developed over Arkansas during the last days of the month, and caused general light to moderate showers over the State and accounted for about a quarter of the month's rain.

Thirty-five reports of high wind were received, but no damage occurred. There were no floods during the month, and rivers were at normal low stages for the season.

TEMPERATURES

The September mean temperature was 72.6°, 1.7° below the 58-year average. The daily run of temperatures were moderate and ranged from the month's high of 102° at El Dorado and Magnolia on the 6th and 8th, respectively, to the low of 35° at the Batesville Livestock Station on the 28th.

PRECIPITATION

The September average of 0.88 inch was just 26.7% of the 58-year average of 3.29 inches, making this the third driest September of record. The lowest of record was 0.45 inch in 1928.

The actual distribution of the rain was poor with the extreme NE corner of the State getting above normal amounts, and Polk County normal, while other stations reported figures down to zero. Two stations reported no rain during the month, while 6 reported only a trace.

Nine hail reports were received during the month, but no damage was reported.

The following reference notes apply only to Table 7 - Daily River Stages:
Readings are made at approximately 7 a.m. (Local time). They are provisional and subject to corrections.
Final and corrected stages will be published in the annual publication "Daily River Stages - Principal Rivers of the United States".

a	Obstructed by rough ice.
b	Frozen but open at gage.
c	Upper surface of smooth ice.
d	Ice gorge above gage
e	Ice gorge below gage
f	Shore ice.
g	Floating ice.
h	Pool stage.
i	Dry at gage.
j	Interpolated.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late for inclusion in this issue.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Data in Tables 3, 5 and 6 are for the 24 hours ending at time of observation. See the Station Index for observation time.

-	No record.
+	And also on later dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Precipitation measured at 6-hourly intervals, no recording gage.
AR	This entry in time of observation column in Station Index means "after rain".
K	Total includes snow which accumulated in collar of the gage during previous period, and fell into gage for this measurement.
M	One or more days of record missing; see Table 5 for detailed daily record.
R	Station equipped with recording gage only. All amounts in Table 3 are for the non-recording gages, except for stations with this reference.
T	Trace, an amount too small to measure.
Z	Hourly amounts from recording gage at the same site may be found in Table 4.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, river stages in feet, and wind movement in miles.

Data in Table 4 were formerly published in the Hydrologic Bulletin for Lower-Mississippi-West Gulf. Amounts in this table are from recording gages. Traces are not shown.

Subscription Price: 15 cents per copy; $1.50 a year. (Yearly subscriptions includes Annual Summary). Correspondence regarding subscriptions should be addressed to the Weather Records Processing Center, Room #9, U. S. Court House, Ft. Worth 2, Texas.

ARKANSAS OCTOBER, 1948

Walter C. Hickmon, Section Director - Little Rock

GENERAL SUMMARY

October, 1948, comparatively, was a moderately mild month. There were no record extremes in either temperature or precipitation; no damage was reported from storms or hail, although numerous thunderstorms, many accompanied by hail, occurred.

General killing frosts for the State came a little earlier than usual (18th), but practically all crops had matured, and considerable harvested. October was the successful finale for a bumper crop-year, and was favorable for the completion of the harvest.

The paths of LOWS during October were generally to the north of the State, and most of the precipitation that occurred was due to the Cold masses of air, associated with these LOWS, moving in over the State. The first cold mass moved in about the 6th; the second and coldest one of the month, began to move over the State on the 16th and accounted for a few of the heavy rains of the month, and also the lowest temperatures.

A series of weak fronts passed over Arkansas after the 17th, but the weather for the balance of the month was mostly controlled by a sizeable HIGH centered over the Middle Atlantic States. Along toward the end of the month, new cold masses of air moved down from Canada and on mixing with some of the warm moist southerly winds moving over Arkansas, due to the HIGH circulation, resulted in the heaviest rains of the month. Even then, the rains were not sufficient to give the State an excess for the month.

There were no floods during the month.

TEMPERATURES

The State average for October, 1948, was 60.0°, 2.8° below the 58-year average. October, 1948 was the coldest October since 1925, and it also tied with October, 1898, for the fifth coldest October of record. The coldest October occurre in 1917, with 56.6°. There were no record extremes during the month, and the departure from normal was due mostly to lower night-time temperatures than usual, while the day-time temperatures were either normal, or slightly above.

The warmest section of the State was down around Columbia County, with Magnolia reporting an average of 65.7° for the month. This figure is 1.6° below their normal. Mammoth Spring again reported the lowest average, with 54.3°. The highest daily temperature was 90°, and reported by two stations; Magnolia on the 1st; and Okay on the 7th. Bethesda reported the lowest for the State, with 20° on the 18th.

The majority of stations over the State reported freezing temperature on the 18th, and the 18th should be considered the end of growing season, except for a few widely scattered sections.

PRECIPITATION

The average precipitation was 2.40 inches, 0.76 inch below the State's 58-year average. Although the 2.40 inches is about the median of the 58-year record, some portions of the State were near a drought stage due to lack of rain. The Alluvial section of the State was the driest with rainfall amounts running from about 15% to near 50% of normal; the driest of that section was along the Mississippi River. Beech Grove reported the least monthly fall, with 0.40 inch; Arkansas City was second lowest, with 0.42 inch. All of the Northwest quarter of the State reported amounts less than half their normal.

The heaviest rainfall fell in the mountainous sections of the Ouachita and Little River Basins and accounted for the relatively high average over the State. The greatest monthly total was 6.06 inches reported by Eagle Gap. Mena reported 5.62 inches. The greatest 24-hour rainfall was 3.43 inches at Eagle Gap on the 30-31st.

Hail was reported on 20 different days for a total of 78 reports, but no damage of consequence was reported.

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin series. The Hydroclimatic Network is a nation-wide net of rain gages -- mostly of the recording type -- which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

The following reference notes apply only to Table 7 - Daily River Stages:
Readings are made at approximately 7 a.m. (Local time). They are provisional and subject to corrections. Final and corrected stages will be published in the annual publication "Daily River Stages - Principal Rivers of the United States".

a	Obstructed by rough ice.
b	Frozen but open at gage.
c	Upper surface of smooth ice.
d	Ice gorge above gage
e	Ice gorge below gage
f	Shore ice.
g	Floating ice.
h	Pool stage.
i	Dry at gage.
j	Interpolated.

REFERENCE NOTES

The four digit idnetification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late for inclusion in this issue.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Data in Tables 3, 5 and 6 are for the 24 hours ending at time of observation. See the Station Index for observation time.

When hourly precipitation is missing for several days, only the first and last days are shown in Table 4.

When hourly precipitation is accumulated over a period of 3 or more calendar days, with unknown hourly or daily distribution, the first and last days are shown in Table 4.

-	No record.
+	And also on later dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Precipitation measured at 6-hourly intervals, no recording gage.
AR	This entry in time of observation column in Station Index means "after rain".
B	Adjusted to a full month.
E	Water-equivalent of snowfall wholly or partially estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record.
R	Station equipped with recording gage only. All amounts in Table 3 are for the non-recording gages, except for stations with this reference.
T	Trace, an amount too small to measure.
Z	Hourly amounts from recording gage at the same site may be found in Table 4.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, river stages in feet, and wind movement in miles.

Data in Table 4 were formerly published in the Hydrologic Bulletin for Lower Mississippi - West Gulf. Amounts in this table are from recording gages. Traces are not shown.

Subscription Price: 15 cents per copy; $1.50 a year. (Yearly subscription includes Annual Summary). Correspondence regarding subscriptions should be addressed to the Weather Records Processing Center, Room 9, U. S. Court House, Fort Worth 2, Texas.

ARKANSAS NOVEMBER 1948

Walter C. Hickmon, Section Director - Little Rock

GENERAL SUMMARY

The movement of Pressure Systems was greatly accelerated during the month, with the weight of the cooling air moving southward from the northern portions of the continent. Numerous LOWS passed either over Arkansas, or adjacent states, giving rapid weather changes, and the usual features of such changes.

November, 1948 was the 9th wettest November of record (58 years); tied with 1947 for the greatest number of raining days tied with 1927 for the 3rd heaviest montly snowfall.

Numerous thunderstorms were reported during the month, with considerable damage being reported on the 4th and 5th, and again on the 18th. Damage is estimated at $130,000.00 for the general thunderstorms of the 4th and 5th, and $10,000 for the thunderstorms over Columbia County on the 18th.

The storm damage of the 4th and 5th is distributed as follows: $30,000 damage to planes and hangars at Searcy; $60,000 hail and wind damage to homes, business houses, greenhouses, and vulnerable personal property at Arkadelphia; the remaining $40,000 damage was scattered over the State, and consisted of broken windows, damaged roofs, and utility damage.

Harvest of the few remaining crops in the fields was delayed slightly by the numerous rains, but no serious loss was reported. Generally, the 1949 crop-year was given a great boost by the storage of sub-soil moisture from the unusually heavy rains of the month, especially over the Alluvial sections.

Due to the fact that the soil was relatively dry, and also the rains being well distributed over the month, no floods in the main rivers of the State were reported.

TEMPERATURE

The November, 1948 average temperature was just about normal with 50.9°, as compared with the 58-year average of 51.3°. There were no radical extremes during the month, and the highest daily temperature reported was 85° at Portland on the 5th; Lead Hill reported the lowest with 13° on the 23rd. Portland also reported the highest average for the month, with 56.3°. Mammoth Spring continues to report the lowest monthly average with 45.8°.

PRECIPITATION

November, 1948, average precipitation was 1.90 inches above the 58-year average, with 5.78 inches. Even with this excess for the State as a whole, about one-fourth of the State was considerably below the 58-year average. The driest counties were the two western tiers of counties extending from Benton and Carroll Counties, southward to Montgomery and Polk Counties.

The least November fall was 0.30 inch reported by Clarksville in Johnson County; the greatest was 12.72 inches at Hampton in Calhoun County. The Alluvial sections of the State received the bulk of the rain, and the southwest portion of the State was the center of this more than double the average rainfall. The greatest 24-hour fall was 4.34 at Boughton on the 2nd.

The average number of days with measureable precipitation was eleven for this November. This figure ties with the 1927 record for first place. Many stations reported they had measurable precipitation on more than half the days of the month.

The first general snowstorm of the winter occurred on the 28th and gave most of the northern half of the State some snow. Marshall reported the heaviest single fall with 7 inches on the 28th; and the greatest monthly total, with 9 inches. The relatively high temperatures at the end of the month finished off the snow rather quickly.

There were 40 reports of sleet on 9 different days; no damage reported. Hail was reported on 7 different days for a total of 27 instances. No crop damage was reported due to season, but considerable other damage was reported on the 4th-5th, as noted in the General Summary.

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nation-wide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U.S. Weather Bureau, Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

The following reference notes apply only to Table 7 - Daily River Stages:

Readings are made at approximately 7 a.m. (Local time). They are provisional and subject to corrections. Final and corrected stages will be published in the annual publication "Daily River Stages - Principal Rivers of the United States".

a	Obstructed by rough ice.
b	Frozen but open at gage.
c	Upper surface of smooth ice.
d	Ice gorge above gage.
e	Ice gorge below gage.
f	Shore ice
g	Floating ice.
h	Pool stage
i	Dry at gage.
j	Interpolated.

REFERENCE NOTES

The four digit idnetification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late for inclusion in this issue.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Data in Tables 3, 5 and 6 are for the 24 hours ending at time of observation. See the Station Index for observation time.

When hourly precipitation is missing for several days, only the first and last days are shown in Table 4.

When hourly precipitation is accumulated over a period of 3 or more calendar days, with unknown hourly or daily distribution, the first and last days are shown in Table 4.

- - No record.
- + And also on later dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- 6 Precipitation measured at 6-hourly intervals, no recording gage.
- AR This entry in time of observation column in Station Index means "after rain".
- B Adjusted to a full month.
- E Water-equivalent of snowfall wholly or partially estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing; see Table 5 for detailed daily record.
- R Station equipped with recording gage only. All amounts in Table 3 are for the non-recording gages, except for stations with this reference.
- T Trace, an amount too small to measure.
- Z Hourly amounts from recording gage at the same site may be found in Table 4.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, river stages in feet, and wind movement in miles.

Data in Table 4 were formerly published in the Hydrologic Bulletin for Lower Mississippi - West Gulf. Amounts in this table are from recording gages. Traces are not shown.

Subscription Price: 15 cents per copy; $1.50 a year. (Yearly subscription includes Annual Summary). Correspondence regarding subscriptions should be addressed to the Weather Records Processing Center, Room 9, U. S. Court House, Fort Worth 2, Texas.

ARKANSAS DECEMBER 1948

Walter C. Hickmon, Section Director - Little Rock

GENERAL SUMMARY

Mild weather characterized most of the month of December in Arkansas, and near-normal precipitation was fairly evenly distributed throughout the month. The Black River at Black Rock and the Lower White were moderately high around the 15th and during the latter half of the month, but no flooding occurred. Except for interruption by showers, the weather during the month was favorable for outdoor work.

Near-normal temperatures prevailed during the first decade; but from the 12th to the 16th warm weather over-spread the state, with record, or near-record, high readings occurring at most stations. Following this warm wave, which brought temperatures in the 80's in the southern counties and readings to the upper 70's to the northern border, there was a reaction to colder weather, the lowest in the state occurring about the 26th.

During the period from the 7th to the 13th, and from the 20th to the 23rd, rainfall was very light and widely scattered, enabling farmers to do some breaking. The remnant of a record-breaking cotton crop was partially picked, but considerable cotton damaged in the fields as frequent showers prevented picking. Rice threshing was completed at the close of the month. Strawberry fields made good growth and winter grains and cover crops were in good condition.

TEMPERATURE

The mean temperature for the month of December was 44.3° which is 1.5° above normal. Monthly means ranged from 51.3° at Magnolia, to 36.1° at Green Mountain, a difference of 15.2° between the Ozarks in the northwest and the southern border of the state. Extremes ranged from 83° at El Dorado on the 13th to 8° at the Batesville Livestock Station on the 26th. Extremes occurred on approximately these dates in most sections of the state.

PRECIPITATION

The average precipitation in December was 4.03 inches, which is only 0.20 inch less than normal. Monthly totals ranged from 8.18 inches at Paragould to 1.41 inches at Dumas. The heavier totals occurred in northeastern counties, while the lighter amounts were in the southern and southeastern counties. There were eleven stations with a trace of snow, but all measurable amounts of precipitation fell as rain. The greatest amount for any day was 4.68 inches at Conway on the 15th. The average number of days with 0.01 inch or more of precipitation was eight.

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

The following reference notes apply only to Table 7 - Daily River Stages:
Readings are made at approximately 7 a.m. (Local time). They are provisional and subject to corrections.
Final and corrected stages will be published in the annual publication "Daily River Stages - Principal Rivers of the United States".

a	Obstructed by rough ice.
b	Frozen but open at gage.
c	Upper surface of smooth ice.
d	Ice gorge above gage.
e	Ice gorge below gage.
f	Shore ice.
g	Floating ice.
h	Pool stage.
i	Dry at gage.
j	Interpolated.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late for inclusion in this issue.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Data in Tables 3, 5 and 6 are for the 24 hours ending at time of observation. See the Station Index for observation time.

When hourly precipitation is missing for several days, only the first and last days are shown in Table 4.

When hourly precipitation is accumulated over a period of 3 or more calendar days, with unknown hourly or daily distribution, the first and last days are shown in Table 4.

-	No record.
+	And also on later dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Precipitation measured at 6-hourly intervals, no recording gage.
AR	This entry in time of observation column in Station Index means "after rain".
B	Adjusted to a full month.
E	Water-equivalent of snowfall wholly or partially estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record.
R	Station equipped with recording gage only. All amounts in Table 3 are for the non-recording gages, except for stations with this reference.
T	Trace, an amount too small to measure.
Z	Hourly amounts from recording gage at the same site may be found in Table 4.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, river stages in feet, and wind movement in miles.

Data in Table 4 were formerly published in the Hydrologic Bulletin for Lower Mississippi - West Gulf. Amounts in this table are from recording gages. Traces are not shown.

Subscription Price: 15 cents per copy; $1.50 a year. (Yearly subscription includes Annual Summary). Correspondence regarding subscriptions should be addressed to the Weather Records Processing Center, Room 9, U. S. Court House, Fort Worth 2, Texas.

ARKANSAS

ANNUAL SUMMARY 1948

Volume LIII No. 13

FT. WORTH: 1949

ARKANSAS YEAR 1948

Walter C. Hickmon, Section Director - Little Rock

GENERAL SUMMARY

The year 1948 for the State as a whole showed a deficiency in temperature of one degree, and in precipitation 1.64 inches in excess of the average for the past 58 years. The dependence of agriculture upon the weather was clearly demonstrated during the 1948 crop season. During the Spring and Summer months rainfall was nearly normal, January and April being the only months with a negative departure; and at the close of August the accumulated excess was 3.16 inches. Temperatures during the Spring and Summer were below normal, April and June being the only months with a positive temperature departure. March set new low records, with Gravette and Lead Hill reporting 14° below zero, and snowfall averaged 1.4 inches, with 12 to 14 inches in northwestern counties. This cold weather during March retarded vegetation and held fruit and berry development in check, resulting in excellent crops. In April there was a marked reaction to warm dry weather, and several stations set high records. Farming made rapid progress during the month, planting being completed, and most crops were up to good stands by the close of the month. May, June, July and August were favorable for agriculture, with showers occurring at frequent intervals. Crops made excellent progress. Cotton, corn, soybeans, rice and hay crops were the best in years. September and October were dry, cool and favorable for maturing and harvesting. Killing frosts occurred over much of the State on October 18, but crops were generally matured and damage was slight. There was too much rain in November, delaying cotton picking. Rain continued in December and some of the bumper cotton crop was unpicked at the close of the year. Rice threshing was completed during December. The year as a whole was extremely favorable for agriculture.

TEMPERATURES

The mean temperature for the year was 60.4°, which is 1° below the 58-year average. January was the coldest month of the year, the January mean temperature being 33.5°, which is 7.6° below normal. The lowest temperatures occurred in March, with 14° below zero at Gravette and Lead Hill. These are the lowest March temperatures on record in Arkansas. July was the warmest month of the year, with a mean temperature temperature of 80.5°.. This is exactly normal. The highest temperatures occurred in August, 108° at Magnolia on August 13 being the highest reported in the state during 1948. El Dorado reported 105° on August 15. All maximum temperatures were well within the limits established by previous years.

PRECIPITATION

The total rainfall for 1948 was 50.09 inches, which is 1.64 inches above the 58-year average. February was the wettest month, with an average rainfall of 6.08 inches. September was the driest with 0.88 inch. The grestest annual total was 70.56 inches at Stuttgart; the least, 31.46 inches at Fort Smith. The greatest monthly total for any individual station was 15.16 inches at West Fork in August. Compton had no rain during September, and numerous stations had only a trace. Precipitation throughout the year was ample for diversified agriculture.

STORMS

A glaze storm starting January 26 in the two southern tiers of counties, disrupted communication lines, power lines, transportation, and damaged forests and roads, the total damage being estimated at near $20,000,000.

A small tornado occurred March 25 in Crawford and Washington Counties, doing property damage estimated at $14,000. At about the same time tornadoes occurred at Booneville and Caulksville in Logan County, with $5,000 damage reported. Thunderstorm and high wind damage on March 30 was about $5,000. A severe local thunderstorm in April did property damage estimated at $36,000. A severe thunderstorm and heavy hail at Union, Ouachita, Calhoun and Bradley Counties on April 8 did extensive damage estimated at $1,100,000. Heavy hail in Washington County on May 15 did damage estimated at $50,000. There was one death due to lightning in Conway County on May 5. Hail damage in Pike County on June 6 was $33,000. Lightning set fire to storage facilities of an oil refinery in El Dorado on June 6, and damage estimated at $10,000 resulted. During a violent thunderstorm at Little Rock on June 16 wind damage of $20,000 occurred, and elsewhere over the state additional $25,000 damage occurred on this date. At Stuttgart on August 26 a wind storm did $5,000 property damage. Property damage at Pine Bluff and Forrest City during August amounted to $35,000, and thunderstorm and wind damage in November was approximately $140,000.

FLOODS

There were minor floods on the Petit Jean, Ouachita and Lower White Rivers in February, but loss was small. Minor floods in March occurred on all rivers, being most serious on the Ouachita, where several thousand acres were inundated in the Camden area. Minor floods and slight damage occurred in April. The most destructive flood of the year, but which did not reach major proportions, occurred in June on the Arkansas, White, Black and Ouachita. Considerable crop damage resulted, but the water receded in time for replanting. For the year as a whole, the flood loss was not large, and floods were not of major proportions. (WCH)

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nation-wide net of rain gages, mostly of the recording type, which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Delayed data and corrections will be carried only in the June and December issues of Climatological Data.

-	no record.
+	also later dates or months.
//	gage is equipped with a windshield.
B	adjusted to full month.
M	1 to 10 days' record missing; see monthly Climatological Data for detailed daily record.
T	trace, an amount too small to measure.

The subscription price for this bulletin is 15 cents per copy or $1.50 a year (Yearly subscription includes the annual summary). Correspondence regarding subscriptions should be addressed to Weather Records Processing Center, Room 9, U. S. Court House, Fort Worth 2, Texas.
